
PROMPTS

EK TAP COPY

AI-FILM-PROMPTS · MASTER v10 · 4 prompt, chaar alag block

#	PROMPT	MILEGA
1	STORY + PLAN	STORY LOCK, route, shot list
2	CHARACTERS + DUNIYA	portrait image prompts
3	SHOT CARDS	image + video prompt per shot
4	REACH	song, caption, hashtags, timing

Ye tumhari apni file ka fixed version hai — nayi file nahi, wahi 4-prompt system, saari bataayi hui galtiyen theek ki hui.

PROMPTS — EK TAP COPY

AI-FILM-PROMPTS · MASTER v10 · 4 prompt, chaar alag block

Kaise use karna hai: neeche har prompt apne alag block me hai. Block ke andar ka poora text copy karo → AI me paste karo. Bas. Ek ke baad ek — 01 → 02 → 03 → 04. Beech me kuch apne se mat jodo.

#	Prompt	Kya milega
01	STORY + PLAN	STORY LOCK + route + shot list
02	CHARACTERS + DUNIYA	style test, phir portraits (CHAR-naam.png)
03	SHOT CARDS	har shot ka image prompt + video prompt
04	REACH	gaana, caption, hashtag, upload timing

Order yaad rakho: pehle saari IMAGES (SHOT-01 se last tak), phir saare CLIPS.

PROMPT 01 — STORY + PLAN

Paste karte waqt sabse neeche MY STORY me apni kahani 2-4 line likho.

You are a film director, screenwriter and researcher.

I am making my own short film. Not an advertisement, not a brand video. Never mention brands, clients, marketing or audiences.

⊘ DO NOT ASK ME ANY QUESTIONS

Never ask me about emotion, tone, mood, ending, style, pacing, music, audience or "what feeling do you want". All of it is derivable from the story. Deriving it is your job.

You may put exactly ONE thing to me, and only after you have done the work: "Direction 1, 2 or 3?" Nothing else, ever.

△ THE ONE EXCEPTION — A MISSING STORY.

Scroll to the bottom of this message and look at MY STORY. If that block is empty, or still contains the placeholder text in brackets, or is too vague to film, then STOP IMMEDIATELY. Do not research. Do not invent a story. Do not pick a famous story you think I meant. Do not continue with any step. Reply with exactly this and nothing else:

"Mujhe aapki kahani chahiye. 2-4 line me likh dijiye — jo bhi yaad hai, apne shabdon me. Jaise:
'Krishna gopiyon ke kapde lekar kadamb ke ped par chadh jaate hain, gopiyon paani me hain, phir wo maafi maangti hain.'
Bas itna kaafi hai. Research aur baaki sab mera kaam hai."

Then wait. The story is the one thing I must give you and the one thing you can never derive. Everything else — emotion, tone, ending, style, camera, casting — you derive yourself, and asking me about any of those is still forbidden.

NEVER ask me to upload, provide or identify a reference image, an example, a photo or a link. I have nothing to give you. You have the research and my story — that is everything you need. Decide yourself. If something is genuinely missing, state an assumption and continue: "Assuming [X] — correct me if wrong." Never an open question.

DERIVE, DO NOT ASK:

| If the story is | Emotion | Ending | Register |

| ---|---|---|---|

| A divine leela | awe, tenderness, goosebumps | release, then a small ache | DIVINE |

A god's mercy	surrender, tears	pure release	DIVINE
A god's play	delight becoming meaning	release + a lingering look	DIVINE
A separation	longing	ache – do not resolve it	DIVINE
A sacrifice	pride through grief	ache held in silence	ROYAL
A battle	rising defiance	release, one beat of cost	ROYAL
An injustice	quiet anger	ache	GROUNDED
A family memory	warmth and loss	ache, then warmth	GROUNDED
A folk tale	wonder	release	STYLISTED

Always true: the film ends on an image, never narration · ambient sound is the default, no voiceover unless I said so · if the story is about a deity the register is DIVINE, always.

DO THESE SEVEN STEPS IN ORDER

== STEP A – RESEARCH THE TRUTH ==

Search the web. My story is from memory and may be wrong or incomplete. Find what actually happened.

Report briefly: the verified sequence of events · the era, season and time of day · exact clothing, jewellery, weapons and objects of that time and place · what the landscape looked like THEN · the common mistakes people make about this story · one true detail almost nobody knows · anything sensitive to respect.

If I got something wrong, say so in one line and use the truth.

Mark anything unknown as UNKNOWN – never invent.

== STEP B – READ MY STORY BACK ==

Prove you understood before you create. Eight lines:

genre · the one emotion this story exists to produce · whose story it truly is (whose heart breaks or opens) · era, season, time of day · visual register · and the one thing that, if got wrong, kills the film. If I said something wrong, correct it here.

☆ THEN, BEFORE ANYTHING ELSE, LIST MY NON-NEGOTIABLES.

Go back to MY STORY and pull out every concrete thing I actually wrote – every person I named, every place, every object, every action, every image. Print them as a numbered list headed MERI CHEEZEIN. These are mine and they are fixed.

Then the rule that governs everything after this point: every one of those items must survive into the finished film. You may add around them. You may order them differently. You may not replace one with something you think is better, quieter, safer or more tasteful, and you may not drop one because it is hard to generate. If I wrote a flood, there is a flood. If I wrote a crowd, there is a crowd. The commonest way this process fails is that my rough idea gets smoothed into a generic pretty film that is no longer mine.

At the very end of PROMPT 1 you will tick that list off, item by item, and show me where each one lands.

And in PROMPT 3 every single shot will have to quote one line of MY STORY – the line that produced it. So my story must come back here in my own words, complete, not summarised.

== STEP C – GIVE ME THREE DIRECTIONS ==

Do not ask what I want. Tell me what is possible.

Three genuinely different ways to tell this – different POV, different entry point in time, different emotional frame.

DIRECTION [n] – [name it]

Angle : whose eyes, where we enter the story

Opens on : the literal first image, and the question it plants

Turns on : the moment everything changes

Ends on : the last image – release or ache

Feeling : what the viewer feels in the last 3 seconds

Why it works : one line

Risk : one line

△ ALL THREE DIRECTIONS MUST CONTAIN EVERY ITEM FROM MERI CHEEZEIN.

They differ in whose eyes we watch through, where we come in, and what the film is finally about. They do NOT differ in which of my things they keep. A direction that quietly drops my flood, my crowd or my object is not a direction, it is a different story.

Under each one, write the line: "Keeps all of MERI CHEEZEIN: yes".

Mark one ★ RECOMMENDED. Choose the one with the most EMOTION, not the most action. Then ask: "Direction 1, 2 or 3?" and WAIT.
If I reply "go", use your recommended one.

== STEP D – THE IMAGINATION PASS ==

(after I have picked)

The imagination is YOUR job, not mine. Work these out and state them:

- THE UNTOLD DETAIL – the one true thing from research that almost nobody knows. Build a moment around it. This is what makes people comment "I never knew this".
- THE LADDER – something must change every 5 seconds. Write what changes, and when, across the whole runtime.
- THE ONE IMAGE – the single frame they cannot forget.
- THE LAST BEAT – one small moment AFTER the obvious ending.
- ★ THE PHASES – break the film into 3 to 5 EMOTION PHASES and name them (for example: shanti → chaah → pariksha → toot → kripa). Every phase gets ONE line saying what the audience feels and how the world looks while it lasts. These phases decide the look, the light, the colour and the effects of every shot automatically in PROMPT 3 – so they are decided HERE, in the story, not left for later.

Write them like this:

PHASE 1 "shanti" – khula, thandi roshni, hara-cream, dheema
PHASE 2 "chaah" – paas, garam, ek loud rang, roshni ek side se
PHASE 3 "toot" – sabse paas, andhera, haath me camera, bada
VFX event yahin
PHASE 4 "kripa" – phir khulta hai, saaf tez roshni, sabse loud
rang, shaant locked frame

Rules: show the consequence, not the event · withhold, do not explain · track one object through the film · silence before impact · weather and light carry the feeling.

Banned: narration explaining emotion · beauty shots with no story · predictable shots · any beat repeated.

== STEP E – BUILD THE STORY FROM ITS TRUE BEGINNING ==

△ Whatever I described is the MIDDLE of the story, never the start. Build what came BEFORE (how everyone got there) and AFTER (where everyone went). Then write a numbered EVENT CHAIN – every physical event in time order, plain language, one event per line.

Chain rules:

- Start from the earliest moment the audience needs to see.
- Every character's ENTRY is shown. Nobody appears from nowhere.
- Every character's EXIT is shown. Nobody vanishes.
- Every move from place A to place B is its own line.
- Every object tracked: where it came from, who holds it, where it ends up.
- CONNECTIVE BEATS: if a body must change state between two events, that change is its own event. Sitting in 5 and standing in 6? Then "she rises" is event 5b. Empty-handed then holding a lamp? "She picks up the lamp" is an event. Never skip these.

Then a CAST PRESENCE TIMELINE – one column per character, one row per event, each cell exactly one of:

ABSENT · ARRIVES (from where, how) · ON · OFF (where they are and what they are doing) · LEAVES (to where) · GONE

Hard rules: nobody goes ABSENT → ON without ARRIVES in between.

Nobody goes ON → GONE without LEAVES. A group arriving together is still an arrival and still needs to be seen.

Then one line per character: "[name] enters at event [#] from [where], leaves at event [#] to [where]." If you cannot fill that line, the chain is incomplete – fix it.

Finally answer plainly. Any "not shown" means an event is missing:

- Where does the story open, and why is that the right first frame?
- How does each character arrive?
- What is the exact turning point?
- Where does each character go afterwards?
- Where does it end, and why is that the right last image?
- Could a viewer ever ask "how did they get there?", "where did she come from?", or "when did she stand up?" – if yes, fix it.
- Does any action happen twice? Delete one, or make the second a

clearly later stage with visible progress in between.

== STEP E2 – THE ROUTE (how the film travels) ==

A film feels connected when the audience can WALK the route in their head. Not "scene 1, scene 2" – but "she was here, then she went through there, then she came out here."

Write THE ROUTE as one unbroken line of places:

PLACE 1 → [how she leaves] → PLACE 2 → [how she leaves] → PLACE 3 ...

△ THE THRESHOLD LAW – this is what makes scenes feel connected:

Between any two places there must be THREE shown beats, never two:

1. LEAVING – she is seen exiting place 1 (standing up, turning, walking out of frame, reaching for the door)
2. THRESHOLD – the in-between itself: the doorway, the gate, the stairs, the path, the boat, the corner she turns. This is a real physical action by a real character.
3. ARRIVING – she is seen entering place 2 (coming through the gate, stepping onto the road, the light changing on her face as the new place opens up)

Worked example so there is no confusion:

- ✗ NOT CONNECTED: she is getting ready at home → she is dancing on the road. The audience is dropped. It feels like two different videos.
 - ✓ CONNECTED: getting ready at home → she picks up her dupatta and turns to the door → she pulls the door open → she walks down the steps → her hand pushes the gate open → the gate swings and the road is revealed behind it → she steps onto the road → she stops, the music hits → she begins to dance.
- Same story. But now every scene grew out of the one before it.

Rules for the route:

- The film travels ONE WAY. Never return to a place unless the return is itself the story, and then it must look different.
- The THRESHOLD beat is never an empty cutaway of scenery. It is always a person doing a physical thing – a hand on a gate, feet on a step, a curtain pushed aside. If nobody is doing anything in it, delete it; it is filler.
- No place gets more than 3 shots in a row.
- Every threshold is a shot. Write it into the event chain now.

☆ THE PROGRESS LAW – the cure for "the video isn't going anywhere"

A film can obey every rule above and STILL feel stuck. That happens when the character moves a lot but never gets anywhere – she walks, she turns, she walks again, all inside the same patch of ground, and the audience sees the same walls behind her every time. Movement is not progress. Progress is the BACKGROUND being different.

So the test is not "is she moving?" – it is "has the world behind her changed?"

For every shot, write one line: WHAT IS BEHIND HER. Then read that column straight down. If the same backdrop repeats more than twice in a row, the film has stalled, however busy the character is.

Three ways to force real progress, use all three:

1. THE BACKGROUND CHANGES EVERY SHOT OR TWO. She leaves the mud wall behind and now there are reeds. Then water. Then the far bank. If shot 7 could be swapped with shot 4 and nobody would notice, both shots are standing still.
2. DISTANCE TO THE DESTINATION SHRINKS, VISIBLY. Decide the one place the whole film is heading toward – the tree, the gate, the river, the person. Then put it IN the frame, getting closer:
 - shot 3 – a shape far off through the reeds
 - shot 6 – the tree now fills a third of the frame behind her
 - shot 9 – she is under its branchesThe audience cannot feel progress they cannot see. Give them a landmark and let it grow.
3. THE GROUND ITSELF CHANGES. Swept earth, then dust, then wet soil, then river sand. Underfoot texture is the cheapest and strongest signal that she has genuinely travelled.

Also: never give two neighbouring shots the same shot size AND the same camera move. Wide-tracking, then wide-tracking, reads as one long stuck moment even when the location has changed.

Print a PROGRESS TABLE before the shot list:

shot # · place · what is behind her · how far to the destination

Then confirm in one line: "The background changes at least every two shots, and the destination is visibly closer each time it appears."

If it is not true, add the missing shots now.

Print the route, then confirm: "Every place change in this film has a LEAVING, a THRESHOLD and an ARRIVING." If one is missing, add the event and renumber the chain.

== STEP E3 – THE EFFECT DECISION (numbers, not guesses) ☆ v10 ==

"Some smoke" and "light fog" mean nothing. The model guesses, and its guess is always too much smoke and too weak a face. So decide the amounts HERE, in the story, with numbers that mean the same thing in every shot of the whole film:

smoke 0-5 · fog 0-5 · dust 0-4 · rain 0-4

fire: how many flames, how tall in centimetres, and where each one is

smoke 0 none · 1 one wisp thinner than a wrist · 2 two or three wisps at chest height, face still clean · 3 a low band up to the waist plus two columns, eyes and mouth still sharp · 4 up to the neck, eyes and brow only · 5 whole frame, silhouette only
fog 0 none · 1 ankle · 2 knee · 3 waist · 4 chest · 5 full frame
dust 1 motes in a beam · 2 off the ground under footsteps ·
3 the beam itself visible · 4 the air greys out, distance lost
rain 1 few slow drops · 2 steady, visible on dark cloth ·
3 heavy, water standing on the ground · 4 downpour, faces unusable

☆ THE RULE THAT MATTERS: in any shot where the audience must READ the face, nothing in front of it goes above 2. Levels 4 and 5 are for silhouettes, wides and object shots only.

Write it like this in the story, beside the phases:

"during the bath, heavy steam – smoke level 2, face completely clean" · "the curse scene hides her face – smoke level 5, silhouette only, the reveal comes later" · "rain level 3, water standing on the ground"

Nothing in this film may be described later as "a little smoke" or "some fog". It is a number, chosen now.

== STEP F – THE STORY LOCK ==

△ THIS IS THE MOST IMPORTANT OUTPUT OF THIS PROMPT.

Everything after this will be done by tools that have NEVER SEEN this conversation. If the story is not written down here completely and plainly, it WILL be lost and the video will end up being about something else.

Print a self-contained block that makes full sense to a stranger. Plain words, no jargon:

===== STORY LOCK =====

TITLE:

LOGLINE: one sentence – who, what they want, what stops them.

THE FILM IN SIX LINES: what happens, first to last.

WHERE AND WHEN: place, era, season, time of day, duration.

VISUAL REGISTER: DIVINE / ROYAL / GROUNDED / STYLISED

WHO: for each character – name, who they are, what they want in this film, and how they are different at the end.

EVENT CHAIN: the full numbered chain.

THE ROUTE: place → how she leaves → place → ... with the LEAVING, THRESHOLD and ARRIVING beat named for every change of place.

CAST PRESENCE TIMELINE: the full table.

THE TURNING POINT:

HOW IT ENDS: the last image and the feeling it leaves.

FEELING SCENE BY SCENE: one line each – what the audience feels.

EMOTIONAL PEAK: the single shot carrying the most feeling.

THE ONE IMAGE: the frame they must remember.

☆ THE PHASES: the 3-5 emotion phases, in order, with one line of look each (light, colour, camera, effects).
☆ THE EFFECTS (numbers): every place smoke, fog, dust, rain or fire appears, with its number and whether a face is readable. Plus the ONE big effect and the shot it lands on.
☆ MY CHEEZEIN COVERED: a short table – every item of MERI CHEEZEIN and the event number where it appears.
DO NOT CHANGE THESE: the 5 things that would break the film.

Then tell me exactly this:

"✓ STORY LOCK ready. Copy it and save it. Now paste PROMPT 2 together with this STORY LOCK."

MY STORY (rough, from memory – research it and fix it)
△ If the line below is empty or still in brackets, STOP and ask me for the story. Never invent one.

[YAHAN APNI KAHANI 2-4 LINE ME LIKHO]

RUNTIME: [30 / 45 / 60] seconds

🔗 NOW COPY PROMPT 02

PROMPT 02 — CHARACTERS + DUNIYA

Iske saath STORY LOCK bhi paste karna hai. Ye step sirf chehre aur jagah banata hai.

Now build the reference images for this film.

— RULES FOR THIS WHOLE PROMPT —

- Do not ask me any questions except the one style question below.
- NEVER ask me for a reference image, an upload, or an example.
I have nothing to give you. Everything you need is in the STORY LOCK at the bottom of this message. Read it and decide yourself.
- You are not generating images here. You are WRITING THE IMAGE PROMPTS that I will paste into an image tool myself. Every prompt must be complete, self-contained and copy-paste ready.

— ● RULE 0 – STEP LOCK (ye step sirf CHEHRE aur JAGAH ka hai) —

This step makes characters and places. Nothing else. Not one thing else.

✓ ALLOWED in your answer:

- the story read back in eight lines
- the style test prompts (STYLE-A2 / STYLE-A)
- the cast list
- the DNA line for every person
- the location DNA line for every place
- the palette
- ONE upload portrait prompt per person
- the character sheet and world sheet prompts (planning only)
- the opening frame prompt
- the upload list

x NOT ALLOWED in this answer, not even as an example, not even in a small box, not even "just to show you":

- any video prompt
- any camera movement, lens or camera height for a shot
- any timestamp like [00:00-00:02]
- any shot list, shot number or shot card
- any beat timeline
- any music, caption or hashtag

If even one video prompt or one camera move for a shot appears in your answer, the whole answer is wrong. Throw it away and write it again using the allowed list only.

☆ And finish your answer with this exact line, so I always know what is next:

"STEP 2 POORA. Ab PROMPT 3 paste karo – shot cards wahi banayega.
Us se pehle koi video prompt nahi banega."

— FIRST: THE STYLE —

Do not ask me what style I want, and do not ask me for a reference. YOU choose one single moment from this film to use as the style test – pick the strongest emotional moment from the STORY LOCK, one character, one clear action. State which moment you picked and why, in one line.

Then write TWO complete image prompts of THAT SAME moment – same character, same pose, same framing, same light. Only the visual treatment differs. Each prompt must fully describe the character, the place and the action on its own, because the image tool has seen nothing else.

Label them clearly and give each a filename:

STYLE-A2.png, STYLE-A.png

STYLE A2 – MODERN LIVE ACTION ★ DEFAULT

A real actor photographed on location on a modern digital cinema camera, ARRI Alexa 35 with Cooke S7 anamorphic lenses, clean and sharp. ONE motivated light source with a named direction, a clear bright side and a clear shadow side on the face. Healthy skin with fine natural texture and a light sheen on the forehead and cheekbones, individually visible hair strands, crisp new fabric with a soft sheen where it catches the light, bright polished metal, true depth of field falloff, very deep blacks, clean bright highlights, strong contrast, and a restrained colour palette where most of the frame sits near grey and only ONE colour is allowed to be strong. Looks like a frame from a film released this year.

STYLE A – HIGH CONTRAST CINEMA

The same capture discipline and the same modern cleanliness, one motivated light source, deeper shadows, stronger contrast, shallow depth of field. Bolder and more graphic, still a photograph.

Tell me: "Generate these two images, look at them, and tell me which you prefer – A2 or A?" Then WAIT for my answer.

Do not continue to the character sheets until I have replied.

△ THERE IS NO "DIVINE GLOW" STYLE AND YOU MUST NOT INVENT ONE.

A glow style is how a film turns into calendar art. If a divine register is needed, it is carried by MATERIALS, not by light – see the rule below.

— THEN: THE IMAGE PROMPTS —

Once I pick, write me the actual copy-paste image prompts. I will paste each one into an image tool myself. Number them and give me a filename for each so the files stay organised.

△ IF THE REGISTER IS DIVINE OR ROYAL, read this first. It is the single easiest way to wreck a film, and almost everyone wrecks it.

THE RULE: DIVINITY COMES FROM MATERIALS, NEVER FROM LIGHT.

A god looks divine because of what he is WEARING and what he is MADE of – heavy raw silk with a deep sheen, bright worked gold with sharp deep engraving that catches the light, big uncut gems, dense fresh flowers, skin lit like skin. He does not look divine because the air is full of golden mist. He looks divine because he is wearing more, and better, than anyone else in the frame.

The moment you add glow, the image stops being a photograph. These words are what produce that plastic, computer-rendered, calendar-art result, and they are BANNED in every prompt you write:

glowing skin · luminous · radiant · aura · halo · god rays ·
light shafts · sunbeams through trees · golden mist · golden haze ·
divine light · ethereal · dreamlike · otherworldly · magical ·
shimmering · sparkling · floating petals · floating particles ·
light bloom · lens flare · backlit glow · rim glow · heavenly

Also banned, because they make a god look poor rather than real:
simple · plain · ordinary · rustic · humble · unadorned ·

weathered · faded · coarse cotton · no jewellery

So: how a divine character is built instead.

x CALENDAR ART: "Krishna with glowing luminous blue skin, divine aura, god rays streaming through the trees, golden mist, floating petals, ethereal dreamlike atmosphere"

✓ A PHOTOGRAPH OF A DIVINE FIGURE: "a man of about twenty-two, his skin an even deep blue-grey, smooth and unlined with fine natural texture and a light sheen along the cheekbone, lit from the front left by low sun so the right side of his face falls into real shadow; a heavy saffron raw-silk dhoti with a hand-woven gold zari border, the silk falling in sharp folds; a gold crown of worked metal, bright and polished, the engraving cut deep and catching the light, and one peacock feather with separated barbs; a thick garland of fresh marigolds and tulsi"

Read them again. The second one has MORE gold, MORE silk, MORE ornament. It is more divine, not less. It just refuses to glow.

☆ MUTED IS NOT THE SAME AS FADED – AND THIS TRIPS EVERYONE

Expensive modern footage is NOT colourful. Look at any big film of the last ten years and most of the frame sits near grey, with one colour allowed to be strong – skin, or fire, or one piece of cloth. That is not the same thing as looking old.

MODERN AND EXPENSIVE OLD AND CHEAP
colour pulled toward grey colour washed out everywhere
blacks are deep and solid blacks are grey and lifted
highlights clean and bright highlights dull and flat
sharp, no grain soft, grainy, hazy
one strong accent colour no colour anywhere
→ looks like this year → looks like a scanned photo

So write: a restrained palette near grey, ONE strong accent colour, very deep blacks, clean bright highlights, strong contrast, sharp. Never write: faded, washed, muted-and-soft, grainy, hazy, dusty, low contrast.

☆ THE AGE LINE – WHY EVERYONE COMES OUT LOOKING OLD

If you do not state an age, the model picks one, and it almost always picks older than you meant. Worse, every word used to make an image look real – pores, lines, weathered, tarnish, worn, faded, grain, muted – is also a word that means OLD. Use them on a young character and a twenty-year-old comes back at forty-five, and the whole film looks like it was shot decades ago.

So every character DNA line MUST open with an age, in years, and with the words that go with that age:

- ✓ "a woman of about nineteen, smooth unlined skin with fine natural texture and a light sheen on the cheekbone, full cheeks, bright clear eyes, thick glossy black hair"
- ✓ "a man of about twenty-two, a lean jaw with faint stubble only along the edge, smooth forehead, bright clear eyes"
- ✓ "a woman of about sixty, deep lines across the forehead and at the eyes, thinning grey-streaked hair, loose skin at the throat" ← ageing words ONLY when the character IS old

For anyone under thirty, these words are banned from the DNA line and from every image prompt: pores, wrinkles, lines, crow's feet, weathered, leathery, sun-damaged, rough, coarse, gaunt, sagging, grey hair, sunken, tired, aged, elderly, mature.

AND THE SAME FOR THE WORLD. If the film is set today, say so in the world DNA and say it in the picture: clean modern clothing with sharp new stitching, undamaged paint, working electric light, present-day haircuts, glass, steel, fresh fabric dye. If the film is set in the past, say WHICH period and say it through objects – never through decay. A period is a set of things, not a layer of dust. Faded, peeling, cracked and crumbling do not say "old era",

they say "low budget".

△△ AND THE BIGGEST ONE: NEVER WRITE THE DEITY'S NAME IN AN IMAGE OR VIDEO PROMPT.

Write "Krishna" and the model does not picture a person. It reaches for everything ever labelled Krishna in its training – and that is overwhelmingly devotional poster art, temple calendars, glowing murals and 3D devotional renders. The name alone summons the style, and no amount of camera wording afterwards will beat it. The same is true of Radha, Shiva, Ram, Hanuman, Durga, and of "Lord", "Shri", "deity", "divine figure", "God".

So the name lives in the STORY, the plan and the shot titles – where it belongs and where it helps me follow along. It NEVER appears inside a prompt I paste into a tool.

Inside a prompt, the character is only ever a physical human being:

- x "Lord Krishna standing under a kadamba tree, divine, devotional"
- ✓ "a young man of about twenty, lean and broad-shouldered, skin an even deep blue-grey, shoulder-length curling black hair, a tall worked-gold crown holding one peacock feather, a saffron raw-silk dhoti with a woven gold border, a bamboo flute in both hands, standing under a broad kadamba tree"

Everything that makes him recognisable is still there – the blue skin, the crown, the peacock feather, the flute, the dhoti. Any viewer knows exactly who he is. The model, meanwhile, has been handed a photograph brief instead of a poster brief.

This is what the CHARACTER DNA LINE is for. Write the DNA line so it never contains the name, then paste it as-is. Put the name only in the card heading, like "SHOT 07 – Krishna under the kadamba".

△ ALSO BANNED, for the same reason – these are poster words, not photography words, and every one of them pulls toward a render:

8K · 4K · ultra-realistic · hyper-realistic · ultra-detailed · highly detailed · masterpiece · premium · devotional · spiritual · majestic · epic · breathtaking · stunning · beautiful · cinematic (used on its own as an adjective) · high budget · IMAX quality · poster · artwork · rendering

Say the lens, the film stock and the light instead. Those are what a real photograph is described by.

Every divine woman still needs at least: kohl-lined eyes, bindi, maang tikka, nath, jhumka, choker plus a long necklace, bajuband, bangles, mehndi, payal, zari silk, a gold-bordered dupatta, fresh flowers in the hair.

Every divine man still needs at least: a jewelled mukut, tilak, kundal, vaijayanti mala, kantha, bajuband, kada, zari dhoti, kamarbandh, anklets, and his signature object.

Describe each of those as a real physical object with a weight, a weave, a finish and a small imperfection. Never as something that shines by itself.

— 2A. CAST LIST —

List EVERY person who appears – even for one shot. Parents, friends, elders, servants. Anyone without a sheet will change face between shots. For each: name, role in a line, three trait words, age.

△ AGE STAGES: if the film spans time, the SAME character needs a SEPARATE sheet for EACH age. State explicitly which features carry across all ages – eye shape, face structure, skin tone, marks – so it reads as one person growing up, not three different people.

— 2B. THE UPLOAD PORTRAIT – make this one FIRST —

△ READ THIS BEFORE THE SHEET. It prevents two real failures: faces that come out looking cartoonish, and having to upload a pile of images for every shot.

For each character produce TWO different things, and they have different jobs:

1. THE UPLOAD PORTRAIT – one clean photographic portrait: a single

frame filling the whole image, one person, every surface blank and unmarked. THIS is the only file that ever gets uploaded into an image or video tool. Filename: CHAR-[name].png

2. THE CHARACTER SHEET – the labelled multi-view grid in 2C below.
This is a PLANNING document for me to look at and for you to write the DNA line from. It is NEVER uploaded into a tool.

△ WHY THIS SPLIT EXISTS – THE CARTOON FACE BUG

A model reads an uploaded reference as a whole frame and copies its LOOK, not just its content. A character sheet is a designed artifact: a grid, flat studio lighting, labels, colour swatches, several heads floating on one canvas. Upload that into a video tool and it faithfully reproduces exactly those qualities – flat, graphic, illustrated. That is the "it started looking like a cartoon" failure, and it is caused by the reference, not the prompt. Nothing you write in words will outvote it.

So the upload portrait must look like a photograph of a real person and nothing else. Write its prompt like this:

Photographed on a modern digital cinema camera, 85mm lens at f/2.8, eye level, camera height [n] centimetres. A single portrait of one person, vertical 9:16, three-quarter view from the waist up. Lit by soft window light from the front left at 45 degrees, so the left of the face is bright and the right falls into gentle real shadow; weak bounce fill from the right. Daylight temperature.
[the character's full description]
Standing relaxed against a plain mid-grey wall, facing camera, eyes looking into the lens, a calm natural expression, lips closed.

Exactly one person in this frame, no one else, no duplicate, no second figure, nobody in the background.

[the full positive closing block]

One single frame filling the whole image, one continuous plain wall behind, every surface blank and unmarked.

△ Write NO ban list here. A tool with one text box reads "no grid, no labels, no glow" as a request for grids, labels and glow. State only what IS in the frame.

SAVE AS: CHAR-[name].png

✓ DEKHO: ye ek asli insaan ki photo lagni chahiye. Agar isme grid, label ya flat studio look hai, dobara banao – wahi cartoon wali galti karega.

△ AND NEVER STACK REFERENCES

One upload is stronger than four. Each extra reference image adds its own texture and style to the blend, and the more you stack the further the result drifts from photographic. Never upload the character sheet, the world sheet, the style image and the shot still all together.

- IMAGE prompts: upload the character portrait only. One per character actually in the shot. Nothing else.
- VIDEO prompts: upload the shot still only – plus the next shot's still if, and only if, you are pinning a last frame.
- The world sheet and style image are for YOU to look at while writing. They are never uploaded.

— 2C. CHARACTER SHEET PROMPTS (planning only, never uploaded) —

One per character per age stage. Write each as a ready-to-paste prompt. Use this exact structure and fill in the character:

Create a CHARACTER SHEET in one single image, 2:3 portrait, on a plain light grey studio backdrop with even soft lighting.

CHARACTER: [name, age, role]

[full description – face, build, costume, every ornament, colours, skin tone, distinguishing marks]

TOP ROW – four views, identical face in all four:

1. FACE, head and shoulders, looking at lens
2. FRONT, full body, standing
3. BACK, full body from directly behind – hair, braid, the back of the costume and how the garment falls
4. SIDE, full profile

BOTTOM ROW – five tight macro tiles:

1. TILAK or forehead marking – exact shape and colour
2. HAIR – ornament, braid pattern, parting
(for a man: TURBAN or CROWN detail)

3. JEWELLERY – ear, neck and arm, clearly readable
4. HAND – bangles, mehndi, rings, nails
5. FEET – anklets, toe rings, sole
- (for a man: his SIGNATURE OBJECT)

Label every view and tile with small text underneath.

Below the tiles, a bar of five colour swatches from this character: skin, main garment, accent, metal, accessory.

The face must be IDENTICAL in every view and tile.

Photographic realism, word for word: "healthy skin with fine natural texture and a light sheen on the forehead and cheekbones, individually visible hair strands, crisp new fabric with a soft sheen where it catches the light, bright polished metal with deep sharp engraving, clean modern digital capture, very deep blacks, strong contrast, a restrained palette with one strong colour"

[STYLE LINE FROM MY PICK – paste it as WORDS. Never upload the style image itself; an uploaded style reference drags its own texture into the result.]

Under each sheet prompt, print that character's DNA LINE in its own separate block, clearly marked, like this:

```

DNA – RADHA ||
the heading names her so I can follow along. ||
the LINE below never says her name – copy the ||
line only, whole, into every prompt she is in ||

```

a young Indian woman of about eighteen, slender, a soft oval face with a rounded chin and long dark eyes, fair golden-brown skin with fine natural texture, very long jet black hair in one thick braid bound with gold cord and threaded with white jasmine buds, a deep rose pink silk lehenga with dense gold zari embroidery along the hem, a fitted matching choli, a pale gold silk dupatta over her left shoulder, a gold maang tikka with a pearl drop, a small red bindi, a gold nath with a fine pearl chain to her ear, large gold jhumkas, a pearl and emerald choker, gold armlets, stacked gold and red glass bangles on both wrists, a fine gold waist chain, heavy silver anklets with small bells

That is the format and roughly the length. One unbroken line. It must name, in this order: age and build · face shape and skin tone · hair, how it is tied, what is in it · every garment with colour and fabric and how it sits · every ornament item by item · anything always in their hand.

△ Notice what the line does NOT contain: her name, and any word like goddess, divine or devotional. The heading above the box is where the name lives. The line itself describes a human being only – that is what keeps the output a photograph instead of poster art.

△ WHY THIS MATTERS MORE THAN ANYTHING ELSE

This exact line gets pasted, word for word, into EVERY image prompt that character appears in, for every shot, right to the end of the film. Never shorten it. Never reword it. Never replace it with "the same woman as before" or "the same person from the uploaded image".

Repeating the whole line every time is the only thing that keeps the face the same in shot 15 as in shot 1. Changing even a few words is exactly what makes the face drift halfway through a film.

(The VIDEO prompt for the same shot works the other way round – see PROMPT 3, BLOCK 0. There the uploaded still already carries the face, so the video prompt carries a SHORT lock, not the full line. Full line in image prompts. Short lock in video prompts. Never mix them up.)

Then give me the filename: CHAR-[name]-[age].png

— 2D. WORLD SHEET PROMPTS (planning only, never uploaded) —
One per location. Same format:

Create a LOCATION REFERENCE SHEET in one image – a clean grid of ten photographic tiles of the SAME place, labelled underneath.

LOCATION: [name, era, season, time of day]

1 WIDE ESTABLISHING, hero light

2 THE SAME PLACE FROM THE OPPOSITE SIDE

3 THE SECONDARY AREA
4 ONE SIGNATURE DETAIL of this world, close
5 GROUND OR WATER LEVEL, lowest possible camera
6 TEXTURE MACRO – the actual surface material
7 SHOT THROUGH A FOREGROUND – past trees, pillars, reeds
8 HIGH VIEW looking down
9 THE SAME PLACE AT [other time of day]
10 SKY REFERENCE – cloud, haze, sun position
Along the right edge, six colour swatches labelled: earth, water, trees, [signature element], sky, stone.
Every tile the same place, same season, same era, consistent light direction. Photographic, natural light, real texture.
[STYLE LINE FROM MY PICK]

Filename: WORLD-[place].png

Under it, print the LOCATION DNA LINE – one unbroken line naming the place, era, season, time of day, the ground, the main structures, the materials, and what is growing or hanging there.

— 2E. THE COLOUR PALETTE —

From the sheets, write out the film's palette – six colours with what each comes from. Then state: "This palette is now law. No colour outside it may enter any frame."

Also mark which SINGLE colour is allowed to be loud, and where in the film it appears.

— 2F. THE OPENING FRAME —

One finished, full-quality frame of the film's opening image – not a reference, the actual frame as it will appear. Write it as a ready prompt. Filename: HERO-opening.png

Tell me: "This is the quality bar. If any later frame is weaker than this one, regenerate that frame."

— FINISH WITH THIS —

Print a numbered checklist of every image I must now generate, in order, with its filename, in two groups:

GROUP 1 – the style test (2 images, then WAIT for my pick)

GROUP 2 – everything else (portraits, sheets, world, hero frame)

Then say:

"✓ Generate these images now, one at a time, and save them with these exact filenames. When they are done, paste PROMPT 3 together with the STORY LOCK."

And remember the last line of Rule 0 – the STEP 2 POORA line.

👉 NOW COPY PROMPT 03

PROMPT 03 — SHOT CARDS

Iske saath STORY LOCK bhi paste karna hai. Yahan har shot ka image + video prompt milega.

Now turn the STORY LOCK into shot cards I can follow without thinking.

Do not ask me anything at all. If something is missing, state an assumption and continue. Never ask me to upload, provide or identify a reference image or an example – I have nothing to give you, and the reference images already exist with the filenames from PROMPT 2. You are WRITING the prompts I will paste; you are not generating anything yourself.

— FIRST, PROVE YOU STILL HAVE THE STORY —

In eight lines: what this film is about · what physically happens first to last · every character and what each wants · the turning point · how it ends and what the audience feels · what they feel at start, middle and end · the one image they must remember · the five things that must not change.

If any of that is unclear in the STORY LOCK, say which line is unclear and stop. Do not guess. Inventing is what makes the video end up being a different film than the one I told you.

△ THE STORY LOCK IS THE TRUTH. Translate it into shots. Never improve it, reinterpret it, or add events. If a shot you want to write is not in the event chain, you may not write it.

☆ AND THE NEW RULE THAT GOVERNS THIS WHOLE PROMPT – THE TRACE LAW. Every card must be traceable back to MY words. So every card opens with a STORY LINE: a short quote from MY STORY or the STORY LOCK, inside quotation marks – the exact line that produced this shot.

- If a card has no line, it does not exist. Either delete it, or mark it clearly as PURE TRANSITION and keep it 3 seconds or less.
- If two cards quote the same line, they must show DIFFERENT parts of it – one wide, one close – not the same moment twice.
- Never upgrade my words. If I wrote "she looks at him", do not write "she gazes at him with tears, wind lifting her hair". My sentence is the ceiling, not the floor.
- At the end of all the cards, print this table:

Shot	Story line it came from	Invented?
01	"she turns from the door"	no
02	–	PURE TRANSITION
03	"the cloth slips"	no

Anything marked invented gets one line of justification, or it gets cut.

— HOW MANY SHOTS —

Vevo and most tools give 8 second clips. 20 clips × 8s = 160s of material for a 45s film – that is correct, you trim later. Work out the shot count from the runtime and tell me the maths.

PLAN ALL OF THIS BEFORE WRITING ANY CARD

THE SHOT LIST – one row per shot, mapped to the event chain.

Every chain event gets a shot; every shot maps to an event.

Columns: # · ☆ STORY LINE (my words, quoted) · chain event · location · who is on screen · shot size · camera move ·

☆ MOVEMENT THROUGH THE FRAME · ☆ ENTERS FROM which edge ·

☆ EXITS AT which edge · body state at start · body state at end · what the face is doing · duration · CHAIN or CUT ·

☆ ATMOSPHERE (the smoke/fog/dust/rain number for this shot).

State the GENRE MODE from above the table – it governs clip length, which moves are allowed and how the light behaves.

Add a ☆ MOVE column holding the exact named move from for every shot. Read that column down: most rows must be Static, Dolly, Truck, Pan or Follow, and exactly ONE row may hold a bold move. If two bold moves appear, the film is noise – downgrade one. Plus two more columns: ☆ WHAT IS BEHIND HER, and ☆ FROM → TO (where her body starts and ends, with a rough distance for any travelling shot). A travelling shot whose FROM and TO are the same place is a walk on the spot – fix it at the list stage, before any prompt is written.

Add a ☆ SHOT TYPE column using : hand · eyes · detail · silhouette · feet · back of head · wide · full body. Read it down: for every one wide or full-body row there should be about three detail rows. A list full of full-body rows will come out looking like AI however well it is written.

Add a ☆ HANDOFF column from – at least two rows in the film must hand over through a moving object, and one of them at the hardest jump in place or time.

Add a ☆ BIG EFFECT column. Exactly ONE row in the whole table may be filled; every other row says none. Put it on the story's peak. A film with no spectacle shot is a film nobody forwards.

Add a ☆ FACE FROM → TO column: what the expression is at the start of the shot and what it has become by the end. If a row has the same word twice, that shot has no acting in it.

State the film's one travel direction above the table.

The MOVEMENT column can never be blank and the word "static" may appear at most ONCE in the whole table.

Read the BEHIND HER column straight down. The same backdrop may not repeat more than twice in a row – that is the film standing still even while the character moves.

WHO IS IN EACH SHOT – an exact name list per shot. Anyone not named may not appear. Nobody appears before their ARRIVES event.

THE DISTANCE PLAN – for every shot, how much of the frame height the figure fills. Use the ladder:
EXTREME WIDE under 1/10 – tiny, face unreadable, vast world
WIDE about 1/3 – full body with space around
FULL about 4/5 – head to feet
MEDIUM waist up – hands visible
CLOSE-UP head and shoulders – the eyes are the subject
EXTREME CLOSE eyes only – pores visible
Distance is meaning, not variety. Loneliness = wide, figure tiny.
Feeling = close. Choose from the story, then say why.

THE CAMERA PLAN – pick every angle from the emotion:
any reaction → CLOSE-UP, static
strongest feeling → EXTREME CLOSE-UP, camera stops
hiding something → CLOSE, slightly off-axis
power or divinity → LOW ANGLE looking up
shame or defeat → HIGH ANGLE looking down
a relationship → TWO-SHOT or over-the-shoulder
someone unobserved → shot from behind cover
loneliness → WIDE, camera pulling away
For every shot also state FACE ANGLE (full front / three-quarter / profile / from behind) and EYE HEIGHT (at eye level / below / above). If the meaning is in the face, it must be front or three-quarter – a profile hides half the performance, a wide hides all of it. Never leave height unstated; it renders flat. State the emotional reason for every angle. "Variety" is not one.
Rules: no two neighbouring shots share a camera move or a size · keep the camera on one side of the 180-degree line · screen direction holds · light stays on the same side · no more than 3 shots in a row in one place.
★ AND USE 4 TO 6 CAMERA SETUPS FOR THE WHOLE FILM – see .

THE PERFORMANCE PLAN – the most important thing in this film.
A small story with great faces works. A great story with blank faces does not.
For every shot with a face, plan all six:
INTENTION – what they are TRYING to do right now. A want, not a feeling. "to make him look away first."
PUBLIC FACE – what they are deliberately showing.
PRIVATE TRUTH – what is leaking underneath. The gap between these two IS the performance.
MICRO-BEATS – the clip broken into 3 or 4 moments, each with a named muscle action. Also state whether the EYES move before the HEAD or the head before the eyes – that one detail is what reads as real acting.
THE TELL – one involuntary detail: a swallow, fingers tightening, a late blink, a jaw setting, a curling foot.
PLAYING TO – to him / away from him / to the group / to nobody, believing unobserved (the most powerful).

INTENSITY – why anger comes out looking normal:
Tools default every face to pleasant. Write "angry" and you get mildly displeased. Give every performance shot a number 1-10 and describe the muscles AT THAT LEVEL:
ANGER 3 a flicker of irritation, eyes narrowing
ANGER 6 jaw set, nostrils flaring, hard unblinking stare
ANGER 9 face flushed and taut, teeth clenched behind closed lips, temple veins, body rigid, breathing hard through the nose, eyes locked and wet, not blinking at all
Always write one level ABOVE what you want – the render always comes back one level below. Never let the emotion word stand alone; follow it with at least four muscles. Strong emotion needs a close-up. And say what it does to the BODY too – shoulders, hands, breathing, stillness or shaking. A face alone reads flat.

BANNED, they produce dead faces: "smiles" · "looks happy" · "is sad" · "reacts" · "shows emotion" · "divine expression".

THE REACTION RULE: the event is not the drama, the FACE receiving it is. Every significant event needs two shots – the event, then the face. Cut to the reaction a beat late.

★ THE CHANGE RULE – the difference between an actor and a

mannequin. A still frame can carry one expression. A CLIP cannot. If the face is the same at the first frame and the last frame, the audience sees a photograph being panned across, and they read it instantly as machine-made. So for every shot with a face, write the expression as a JOURNEY: where it starts, the exact second it turns, and where it ends. Then write the THOUGHT behind it in the character's own words – that is what fills the eyes. Then one involuntary LEAK. Then give the hands something to do. Those four are carried into the video prompt as BLOCK 2B.

★ AND SUPPRESS IT. Tools render emotion as performance: the mouth opens, the brows go up, the whole face announces itself. Real screen acting is the opposite – a person holding something down while one part of them gives it away. Write the holding down, and write the one place it escapes. A person trying not to cry reads real. A person crying reads like an AI.

TRAVEL THROUGH THE FRAME ★ THE BIGGEST FIX OF ALL

A shot where a person stands in one place and only their hand, their earring or their hair moves is a DEAD SHOT. It reads as a photograph with a filter running on it. It will never cut together with the shot before or after it, however good the prompt is.

- x DEAD: "she sits by the mirror and her earring sways"
- x DEAD: "she stands under the tree and her dupatta lifts"
- ✓ ALIVE: "she rises and leaves the top of frame"
- ✓ ALIVE: "she enters frame left, crosses, exits frame right"
- ✓ ALIVE: "she walks toward the lens and passes it"

So for EVERY shot, write one line called MOVEMENT THROUGH THE FRAME, chosen from these – the frame itself must change during the clip:

- she enters frame left and exits frame right
- she walks toward the camera and passes the lens
- she walks away from the camera and gets smaller
- she rises up out of the top of frame
- the camera tracks alongside her and the background streaks past
- the camera follows behind her as she pulls away
- the camera pushes in / pulls back / orbits, so the background moves
- her feet or hands travel through the frame and out of it

HARD LIMIT: at most ONE shot in the entire film may stay still, and it must be the single biggest emotional close-up, where the feeling moves instead of the body. Every other shot travels. If your shot list has two static shots, you have a slideshow – fix it now.

Also: a character must EXIT a place on screen and ENTER the next one on screen. The last second of a shot in place A should already be her leaving; the first second in place B should already be her arriving. Never let a shot simply begin with someone standing there.

★ AND TRAVELLING MEANS COVERING GROUND, NOT JUST MOVING
There is a second kind of dead shot, and it is harder to spot: the character walks convincingly for the whole clip and ends up exactly where she started. Legs moving, hips moving, braid swinging – and the same wall behind her at the last frame as the first. A walk on a treadmill.

It happens because the shot was planned as "she walks" instead of "she gets from here to there". A walk is a body doing something. A travelling shot is a body CHANGING PLACE. Only the second one moves a film forward.

So plan every travelling shot as a JOURNEY WITH TWO ENDS:

FROM: level with the blue door

TO: under the neem tree, about eight metres on

PASSES ON THE WAY: the stacked clay pots, the tethered cow

Then the beats can be written against real landmarks, and the audience can see how far she has come.

Three rules that make ground-covering visible on screen:

1. SOMETHING MUST LEAVE THE FRAME BEHIND HER. If nothing exits the back of the shot, she has not gone anywhere. Name the thing and the second it disappears.
2. SOMETHING MUST GROW AHEAD OF HER. The tree, the gate, the ghat – small at 0s, large at the end. That growth IS the distance, as far as the viewer is concerned.

3. HER SIZE OR POSITION IN FRAME MUST CHANGE, unless the camera is deliberately matching her pace. Walking away, she gets smaller. Walking past a locked camera, she crosses it and exits. Only a tracking camera holds her the same size – and then the BACKGROUND has to carry the whole job.

Write the FROM, the TO and the metres on every travelling shot before you write a word of its prompt.

SCREEN DIRECTION ☆ WHY TWO CLIPS MERGE OR CLASH

This is the real editing rule behind "the frames don't feel joined".

Pick ONE travel direction for the whole film – normally LEFT to RIGHT – and hold it. If she exits a shot at frame right, she enters the next shot from frame left, still travelling right. The eye then already knows where she is going before the new shot is understood, and the cut disappears.

Break it and the audience feels she turned around for no reason – that is exactly the "alag-alag video" feeling.

Rules:

- State the direction once, at the top of the shot list, and put the entry edge and exit edge on every single shot row.
- Never flip the direction unless you SHOW her turning around inside a shot, or you place a neutral shot (walking straight at or straight away from the lens) between the two sides.
- The same applies to eyelines. If she looks off frame right in one shot, the thing she is looking at appears from frame left in the next.
- Never cut between two camera positions less than 30 degrees apart. That is a jump cut and it reads as a mistake, not a cut.

THE CAMERA MOVE – USE THE REAL NAME ☆ THE HIGGSFIELD METHOD

There is a reason footage from camera-control platforms looks directed rather than drifting, and it is not a secret model. It is that every shot is assigned ONE NAMED, REAL CAMERA MOVE from a fixed list – the same words a camera operator says on a set.

Those names are standard cinematography terms, so every video model already knows them from its training. Describing a move in your own words gets you drift. Naming it gets you the move.

- x "the camera moves quickly towards her face"
- ✓ "crash zoom in on her face"
- x "the camera goes around him in a circle"
- ✓ "360 orbit around him, moving left to right"
- x "the camera follows her while the background stretches"
- ✓ "dolly zoom in – camera pushes forward while the lens zooms out, so she stays the same size and the background stretches behind her"

Pick ONE move per shot from this list, write its exact name, then add the direction and the speed. Nothing else.

— EVERYDAY MOVES – these carry most of a film —

Static camera locked off, subject moves in frame
Dolly In / Out camera travels toward or away, on a track
Super Dolly In/Out the same, longer and more dramatic
Truck Left / Right camera slides sideways, staying parallel
Pan Left / Right camera pivots in place, horizontally
Tilt Up / Down camera pivots in place, vertically
Handheld small natural shake, human and unstaged
Follow / Head Tracking camera holds behind or on the subject
at their pace as they travel

— MOVES WITH SHAPE – one or two in a film —

Crane Up / Down camera rises or falls vertically, high arc
Jib Up / Down a shorter, gentler crane
Arc Left / Right camera sweeps a partial curve around
360 Orbit a full circle around the subject
Lazy Susan the subject turns, the camera holds
Boom Down camera descends, often following stairs
Push to Glass camera moves in until it meets a surface

Through Object camera passes through a gap, door or window

— BOLD MOVES – △ AT MOST ONE IN THE WHOLE FILM —

Crash Zoom In/Out violent fast zoom, for one reaction or reveal only
Dolly Zoom (Vertigo) push in + zoom out together; subject fixed, background warps. Dread, realisation.
Bullet Time time nearly frozen while the camera arcs
Whip Pan a blur-fast pan, usually hiding a cut
Snorricam camera locked to the body, world swings
FPV Drone fast flying path, dives and climbs
YoYo Zoom in then straight back out
3D Rotation the frame itself rotates

△ THE DISCIPLINE THAT MATTERS MOST

A bold move is a punch. Throw one and it lands. Throw six and the film is noise and nobody feels anything. Most shots in a good film are Static, Dolly, Truck, Pan or Follow. Reserve exactly ONE bold move for the single biggest beat, and write in the plan which shot gets it and why.

NEVER stack two moves. "Orbit while zooming and craning up" gives you mush – the model picks one or blends them into drift. One named move, one direction, one speed.

Every shot's move line is written like this:

MOVE: Dolly In · slow · 1 metre of travel
MOVE: Truck Right · matching her walking pace
MOVE: Crash Zoom In · fast · on her eyes – the one bold
MOVE: Static · locked off, she crosses the frame

And the speed word is never optional. "Slow", "steady", "matching her pace", "fast" – a move with no speed renders at the model's default, which is usually too fast and reads as cheap.

SPEED RAMPS – where the film breathes

Real action films do not run at one speed. They ramp: normal speed into slow motion at the peak, then back. Choose the ONE moment in this film that slows down, and state it:
"Shot 11 ramps: normal speed for 0-2s, then slows to 40% for the turn, then returns to normal."
One ramp per film. Two is a music video; three is a mess.

GENRE MODE – set it once, obey it everywhere

A camera-control platform asks you to pick a genre before you generate anything, because genre decides pacing, light and how much the camera is allowed to move. Pick ONE for this film and write it at the top of the shot list. Then every shot obeys it.

DRAMA long takes, slow dolly, soft directional light, the camera waits on faces
ACTION shorter clips, handheld and follow moves, hard light, one crash zoom allowed
EPIC wide lenses, cranes and slow reveals, big landscape, low horizon
NOIR static and slow, hard single-source light, deep black shadow, the frame half dark
INTIMATE close lenses, almost no camera movement, window light, faces fill the frame
FOLK / DEVOTIONAL steady unhurried moves, natural light only, real materials, the camera respectful and never showy

Write: "GENRE: Drama. Clips run 4-6s, moves are slow dolly and static, light is one soft source, the camera holds on faces."
And remember: the EMOTION PHASES from the story () override the genre inside the phase they belong to.

EFFECTS – THE SMALL ONE IN EVERY SHOT, AND THE ONE BIG ONE

Effect-heavy platform footage looks rich for two separate reasons, and most prompts only ever get the first one.

THE SMALL EFFECT – one in every single shot.

Physical things in the air catching the light. Every shot names ONE element in motion:

dust lifting from under a heel · smoke drifting across a beam ·

water droplets thrown off a turn · cloth snapping in wind ·
dry leaves skidding over stone · sand scuffing outward ·
river spray · embers from a fire · rain on a shoulder ·
a flock lifting off in the background · steam off hot metal

Each is a real object with weight that light falls on. They add depth and motion and they cost nothing in realism.

★ And every one of these carries a NUMBER from . "Smoke drifts" is not enough; "smoke level 2, two wisps at chest height drifting left to right at walking pace" is.

★ THE BIG EFFECT – EXACTLY ONE SHOT IN THE FILM.

This is the shot people remember and the shot they send to someone else. A film with no spectacle shot is a film nobody forwards, however beautiful the rest of it is. Plan ONE, on the story's peak, on the same beat as the one bold camera move.

Choose one, and take it from the story – never decoration:

FIRE a wall of flame going up, sparks carried sideways,
heat shimmer bending the air behind it
LIGHTNING a strike that throws hard white light across her
face for a fraction of a second, then darkness
WATER a river surging, a wave breaking over stone, water
thrown upward in a sheet, rain starting all at once
WIND a storm front hitting, cloth and hair pulled flat
in one direction, leaves and grit driven past
EARTH stone cracking, ground splitting, a shockwave of
dust rolling outward along the floor
SCALE the camera pulls back and she is tiny against
something enormous that was there all along
TIME everything in the air freezes mid-fall and the
camera moves through it, then it drops
SKY clouds moving at impossible speed above a still
figure, the light on the ground racing with them
RISE ash, petals or embers lifting UPWARD off the ground
all at once, against gravity

★ HOW TO WRITE IT SO IT DOES NOT COME OUT AS A CARTOON. Never describe the effect as an effect. Describe it as something that happened in front of a real camera, and spend most of the words on its CONSEQUENCES on the person:

- × "a magical divine energy blast with glowing particles"
- ✓ "the water goes up in a solid sheet two metres high and falls back; the spray hits the left side of her face and her eye on that side closes against it; her wet hair is pulled flat to her cheek; the light off the water throws a moving bright patch across her jaw; the ground around her darkens as it lands"

Four things make an effect photographic, and all four must be in the prompt:

- WHAT IT DOES TO THE LIGHT on her face, and from which side
- WHAT IT MOVES on her – hair, cloth, eyelids, her balance
- WHAT IT LEAVES BEHIND – wet stone, scattered dust, a mark
- HER FACE RECEIVING IT – she flinches, squints, braces. An effect nobody reacts to reads as pasted on.

And give it room: the effect shot is usually the longest clip in the film and almost always needs a reaction shot straight after.

△ What is still NOT allowed, ever: glow, aura, halo, god rays, light shafts, golden mist, lens flare, bloom, sparkle, floating luminous particles, divine energy. Those are the calendar-art tells. The difference is simple – an EVENT is allowed, a GLOW is not. Fire is an event. Lightning is an event. A shining aura is not an event, it is a filter. And if a face is behind the effect, read before you write it.

THE MOTION PLAN – this is what stops it looking like a slideshow.

Never write a shot as a POSE. A pose does not move; two poses in a row is a swap, not a film.

- × "She kneels at the water, praying."
- ✓ "Already kneeling, she lowers the last flower onto the water, her hand staying out over the surface as the ripples spread."

Three rules for every shot:

1. START MID-MOTION. The first frame is already moving.
"already lowering...", "still rising...". Never "she stands".
2. END MID-MOTION. Never let a clip settle and stop – that full stop is exactly what the eye reads as a cut.
3. THE HANDOVER. The movement at the end of shot N must be the SAME movement continuing at the start of shot N+1, seen from a new angle. The eye completes it across the cut and the join disappears.

N ends : "weight shifting onto her right foot, knee beginning to straighten"

N+1 starts: "from lower, the same knee still straightening"

Build a handover table: for each shot, the motion at its first frame, the motion at its last frame, and that same motion restated as the next shot's first frame. The last-frame motion you write here becomes BLOCK 3 (the end state) on that shot's card, and the next shot's BLOCK 2 must open on that same movement. They must match word for word – that is what makes the two clips read as one piece. If the motion does not literally reappear, that join will look like a swap – rewrite the pair.

If a join still feels wrong, NEVER add a filler clip. Fix the two shots: extend the action so they overlap · re-angle further · move the cut into the busiest part of the movement · let the camera keep travelling in the same direction across the cut · carry the ambient sound across.

THE BEAT TIMELINE – the cure for "it starts right then goes wrong".

A video tool fills every second it is given. If your prompt runs out of instructions at second 3 of a 6-second clip, the tool invents seconds 4, 5 and 6 by itself – a second action, a head turn nobody asked for, a hand that wanders, a face that changes. The clip did not drift. It ran out of script.

So for every shot, book every single second before writing the card. One line per second, and the number of lines must equal the clip length exactly:

4-second clip = 4 lines

6-second clip = 6 lines

8-second clip = 8 lines

Each line is one small physical fact – a hand, a foot, an eye, a breath, a shift of weight. Not a feeling. Not a repeat.

☆ AND IF THE SHOT IS A TRAVELLING SHOT, EVERY LINE MUST ALSO SAY HOW FAR SHE HAS GOT. This is the difference between a person walking and a person walking on the spot.

A model given only body facts – "her foot lifts", "her braid swings", "her arm swings" – will animate a perfect walk that covers no ground at all. The legs move, the hips move, and she stays exactly where she started, like a treadmill. Everything you wrote happened. You just never said she got anywhere.

So on a travelling shot, every beat names a LANDMARK she reaches, passes or leaves behind:

x WALKING ON THE SPOT – body facts only:

0-1s: her rear foot pushes off the ground

1-2s: her braid swings across her shoulder

2-3s: her lehenga hem sways with her stride

3-4s: her arm swings forward again

Every line is true and the clip will go nowhere.

✓ ACTUALLY TRAVELLING – distance in every line:

0-1s: she starts level with the blue door and moves off, the door sliding behind her right shoulder

1-2s: she passes the stacked clay pots, which leave the frame behind her

2-3s: the tethered cow that was far ahead is now beside her and falls back out of frame

3-4s: the neem tree that was a small shape ahead now fills the left of frame as she reaches it

Same walk. Now she has crossed a real piece of ground.

THE TEST: read your beats and ask "where is she at 0 seconds, and where is she at the end?" If the honest answer is "the same place",

rewrite every line with landmarks.

HOW TO WRITE IT, three parts per travelling beat:

1. WHAT SHE PASSES – something in the world going by
2. WHERE IT GOES – behind her, out of frame left, past her shoulder. Things she passes must LEAVE the frame.
3. WHAT GROWS AHEAD – the thing she is walking toward getting bigger, nearer, more detailed

Also state it once in the prompt, in plain words:

"She covers real ground – roughly [n] metres across this clip. She does not walk on the spot. The background slides past her and does not repeat."

And add to the negatives of every walking clip (in the separate negative box if the tool has one, as positives if it does not):

"no walking on the spot, no treadmill walk, no foot sliding, no repeating background, no looping scenery, the subject must change position relative to the background"

Worked example, a 4-second clip that is NOT travelling – here body facts alone are correct, because she stays put on purpose:

- 0-1s: her fingers close around the door handle
- 1-2s: her wrist turns and the latch gives
- 2-3s: the door starts to swing inward, her weight follows it
- 3-4s: her front foot crosses the threshold, still moving

Now the tool has nothing to invent.

△ If you cannot fill every second with something real, the clip is too long for that action. Shorten it. A 3-second clip that is fully booked beats an 8-second clip that is half empty. Long clips with thin instructions are where drift lives.

THE CONSTANTS AND THE VARIABLES – per shot, two short lists.
The tool changes whatever you left unstated, so state it.

CONSTANTS – must be identical at the first frame and the last:
the face and its bone structure · hairstyle and how it is tied · every garment and its exact state (pallu on the head or off the shoulder – say which) · every piece of jewellery · what each hand is holding · the light direction · the time of day

VARIABLES – the only things allowed to change in this clip:
usually just the one action, the expression moving one step, and the single camera move.

Write the constants into the card so the lock line can name them.

△ If something must genuinely change during the clip – a dupatta slipping, a lamp being set down – it goes in the VARIABLES list AND in the beat timeline at the exact second it happens. Anything that changes without being written in one of those two places is a defect.

☆ And every garment state is also carried shot to shot – see .

THE THREAD – five things that make it one film, not clips:
ONE TRAVELLING OBJECT in 5+ shots, changing as the story changes ·
ONE REPEATING FRAME, ideally the first and last shot ·
LIGHT MOVING ONE WAY ONLY, never backwards ·
ONE AMBIENT SOUND in every shot so audio never resets ·
ONE COLOUR ACCENT only on things that matter.
State all five, then honour them in every shot.

THE JOIN PLAN – do this for EVERY pair of neighbouring shots.
This is the single biggest reason films feel like stitched clips instead of one piece. Make a table, one row per join:

JOIN 01-02 · 02-03 · 03-04 ... one row for every pair.

Columns:

- LAST THING MOVING in shot A (the exact body part or object and which direction it is travelling)
- FIRST THING MOVING in shot B (must be the SAME movement, continuing, seen from a new angle – or the direct physical result of it)
- WHAT CARRIES ACROSS – tick at least TWO of:
 - the same movement continuing
 - the same object, still in the same hand
 - the same sound running underneath

- the same light direction
- an eyeline in shot A answered by what we see in shot B
- a shape or colour in the same screen position
- JOIN TYPE: CHAIN (continuous time) or CUT (new time/place)
- If CUT: which THRESHOLD shot sits between them

△ THE ARRIVAL LAW – no scene may simply begin.

Every new place must be ENTERED on screen by a person. If shot 07 is the first shot in a new place, then shot 06 or 07 must contain the entering – a door pushed, a gate opened, feet stepping in, a curtain moved aside, a body walking into frame from the edge. Never open a new place on a static waiting frame. The audience must feel they walked in with the character.

△ THE EXIT LAW – no scene may simply stop.

Before leaving a place, we see the character begin to leave: standing up, turning away, walking out of frame, reaching for the way out. The film must never blink from place to place.

Worked example of a correct join chain:

- shot 4: she fastens her earring, then her eyes flick to the door
- shot 5: her hand closes on the door handle, pulls ← her look in 4 is answered by 5; same room, same light
- shot 6: from outside, the door opens and she steps through ← the same door movement, new angle: THRESHOLD
- shot 7: her feet come down onto the road, camera rising with her ← the same step continuing
- shot 8: the road opens ahead of her, she stops, breathes ← arrival completed, now the new scene may start

Five shots to walk out of a house. That is correct. That is what makes it feel like one film.

Fill the join table completely before writing any card. Any row where you cannot tick two "carries across" boxes is a broken join – fix it by re-angling, by overlapping the action, or by adding the missing threshold shot, then renumber.

* And between two SCENES, plan the merge shot from .

THE OBJECT HANDOFF – the best join there is, and it is free.

The joins above are good. This one is the one people replay and send to somebody. It works like this:

A glass slips out of a hand. We cut while it is still falling. It is STILL FALLING in the next shot – but that shot is a different place, a different year, a different scene. The glass carried us there.

One object in motion is the only thing that matches across the cut. Everything else changes. The eye follows the object, does not notice the change of world, and the two places become one piece of film. Nothing else joins two places this strongly.

PLAN AT LEAST TWO OF THESE PER FILM, and one of them at the hardest join – wherever the story jumps place or time.

WHAT CAN CARRY A HANDOFF:

- something FALLING a glass, a cloth, a coin, a sword, ash, water poured, a body going down
- something THROWN a stone, a lamp, a spear, a bundle
- something PASSING a horse, a cart, a crowd, a bird, a hand sweeping through the near foreground
- something SWALLOWING dust rolling in, smoke, water filling the frame, a cloak crossing the lens, a door swinging shut into the camera
- something TURNING a wheel, a grinding stone, a spinning coin, a head turning – cut on the turn

HOW TO WRITE IT, AND IT MUST BE WRITTEN IN BOTH SHOTS:

- Shot A's END STATE: name the object, which direction it is travelling, how fast, and where it sits in the frame at the final frame. "The glass has left his fingers and is falling through the lower right of the frame, turning slowly."
- Shot B's FIRST frame: the SAME object, SAME direction, SAME speed, SAME part of the frame – but the world behind it is the new place. "A falling glass turns slowly through the lower right of the frame; behind it, a stone courtyard at

night instead of the hall."

- Four things must match or the trick collapses: the object, the direction of travel, the speed, and its position in the frame. Nothing else needs to match. Nothing else should.

△ DO NOT try to make one clip contain both places. That is the mush problem again. Generate TWO clips and cut between them in the editor, on the frame where the object is in the same spot in both. The cut is free; the effect is not.

△ And the object must be in the story. A falling glass only works if somebody was drinking. An object inserted purely to make a clever cut reads as a trick.

THE SAFE SHOT LADDER – where generators never fail.

There are shots a generator gets right every single time, and shots it gets wrong every single time. Most of a convincing AI film is built out of the first kind. This is not a limitation to work around; it is the actual craft.

ALWAYS RIGHT – build the film out of these:

- HANDS doing one thing – closing, releasing, tying, pouring, gripping a hilt, trembling. A hand carries emotion and has no face to get wrong.
- EYES ONLY – an extreme close-up at the level of the eyes.
- A DETAIL OF AN OBJECT – engraving, a buckle, a bead of water, a blade's edge, a thread pulling loose. (But every detail shot must do TWO jobs – see .)
- A FULL SILHOUETTE against a bright sky or doorway.
- FEET on ground – stepping, sliding, stopping.
- SOMETHING FALLING or BLOWING past the lens.
- THE BACK OF A HEAD with the world in front of it.

USUALLY WRONG – use rarely and keep them short:

- a full body walking at medium distance, seen head to toe
- two people interacting in the same frame
- any crowd where faces are visible
- hands doing something complicated – writing, counting
- a face talking

★ THE RULE THAT FOLLOWS: for every one wide shot, give the film three detail shots. Then the wide shot only has to survive two seconds, and the close work carries the emotion. A film built out of hands, eyes, objects and silhouettes reads as expensive and controlled. A film built out of people walking around in full view reads as AI, no matter how good the prompt is.

And it solves the travel problem too. The FILM must travel – through cuts, new places and changing backgrounds. Every SHOT must have motion. But motion does not have to mean a full body walking: a hand opening, a horse rearing in silhouette, ash lifting, a head turning – all of those are motion, and all of them are safe.

ATMOSPHERE NUMBER SYSTEM ★ (kitna smoke? kitna fog? – andaza nahi)

"Some smoke" and "light fog" mean NOTHING to a video model. It guesses, and the guess is always too much smoke, too weak a face, and a new face invented behind the smoke. So every effect gets a NUMBER, and the number means exactly the same thing in every shot of this film. The story already chose these numbers in PROMPT 1 – your job here is to write the number on every card.

★ SMOKE LEVEL – the number, then the look, then the direction

0 – no smoke at all.

1 – one wisp thinner than a wrist, one tenth of the frame at most. The face is completely clean and sharp. Safe for every face shot.

2 – two or three wisps at chest height, drifting at walking pace. The face stays clean; only the outline of the shoulders softens. ✓ THIS IS THE HEAVIEST SMOKE ALLOWED IN ANY SHOT THAT CONTAINS A READABLE FACE.

3 – a low band up to the waist, plus two moving columns. Eyes and mouth staying sharp; the chin edge may soften.

4 – smoke up to the neck, columns crossing the face. Eyes and brow only. Never in a dialogue shot, never in a face close-up.

5 – the whole frame filled, the person is a silhouette. No face detail of any kind.

★ FOG LEVEL – the number is the height of the fog ON THE BODY

0 – none; ground and distance readable.

1 – ankle height; the feet disappear, the ground still readable.

2 – knee height; the legs vanish, the body fully clear.

✓ Faces must stay at 0, 1 or 2 in fog.

3 – waist height; faces in the middle distance start to go soft.

4 – chest height; the person's own face goes soft. Silhouettes and wides only.

5 – full frame; no ground, no distance, no face. A dreamy or lost moment only, never a plot action.

★ DUST / HAZE 1 motes in a beam · 2 dust off the ground under footsteps · 3 a beam thick enough to see the light itself · 4 the air greys out and the distance is lost.

★ RAIN 1 a few slow drops on skin, visible only against dark cloth · 2 steady drops, visible against dark backgrounds · 3 heavy; water standing on the ground, splash at the feet · 4 downpour; faces not usable.

★ FIRE / FLAME – the count, the height in centimetres, and where each one is: "two oil lamps, flame six centimetres, one left of frame at chest height, one behind her at knee height."

★ Every effect needs a SOURCE that is in the frame, or was in the frame a moment ago: the fire that makes the smoke, the window that makes the beam, the cloud that makes the rain, the breath that makes the steam. An effect with no source reads as a computer mistake.

★ And the atmosphere is CONTINUOUS: every shot starts at the level the previous shot ended on. A change is allowed, but never more than one step between two shots, unless something inside the shot causes it – and then write the cause: the door opens, the fire is thrown, the wind turns.

FACE REVEAL LAW ★ (chehra kab dikhega, kitna dikhega)

A face hidden behind smoke is where identity dies: the model invents new features every time it has to guess. So:

1. Any shot where the audience must READ the face: smoke 0-2, fog 0-2, rain 0-2, dust 0-2. Write the numbers.
2. The heavy levels (smoke 4-5, fog 4-5, rain 4) are for silhouettes, wides and object shots ONLY.
3. A REVEAL is written as a MOVEMENT, with a direction and a duration: "the smoke column drifts to the left and clears her eyes and mouth within two seconds, and stays clear for the rest of the shot." Never write "the smoke clears" with no direction and no time.
4. The reveal shot gets ONE light source at forty-five degrees from the front, with its distance written: "a warm oil lamp, chest height, left of camera, one and a half metres away." A face revealed against the light stays a shadow, and the model fills that shadow with a different face.
5. AFTER a reveal, the next two shots stay at smoke 0-1, so the face is locked in the audience's memory. Never reveal and re-cover at once.

THE TRACE LAW – already stated at the top; this is how it lands on the cards.

- Every card opens with STORY LINE, quoted from my story.
- Every item of MERI CHEEZEIN from PROMPT 1 must point to a shot number. Print that coverage table at the end, like this:

MERI CHEEZEIN item	Shot where it appears	
the flood	09, 10, 11	
her silver payal	03, 07 (close), 18	
...	–	

Any item with no shot is a missing piece – add it now, or write one line saying why it cannot be filmed.

- And the invented table from the top of this prompt, filled.

NOTHING ADDED ☆ (apni marzi se cheezein jodna band)

What is not in my story, my STORY LOCK or my inventory does not go into the frame. Not a prop, not an animal, not a visitor, not weather, not a crowd, not a decoration in the corner to "fill the frame".

Birth, death, wedding, farewell and other ritual steps: use only the steps I actually described. Never add a ritual step that I did not write, and never invent a religious object that I did not mention.

If something is genuinely missing and the shot cannot be built without it, do NOT invent it silently. Do this instead:

1. Build the shot using the most plain, most neutral choice possible.
2. Write that choice at the end, in a block called MY ASSUMPTIONS, one line each:
MY ASSUMPTIONS – 1. she is standing, not sitting (story did not say). 2. the doorway is wooden (the location DNA did not say).
3. Keep that block at the very end of your answer, after the cards and after the tables.

I will read it and correct it. A written assumption I can fix in one minute. A silent invention costs me a whole day of failed generations.

MERGE SHOTS – the short shot that joins two scenes ☆

(Tumhara "beech beech ke seenshots" – ye device hai.)

Between two scenes, and between two big emotions inside one scene, insert ONE short shot, about 4 to 6 seconds, that belongs to both sides. It must contain two of these at the same time:

- the same movement continuing (a turn that becomes another turn)
- the same shape (a circle, a line, a curve repeating)
- the same colour passing from one object to another
- the same action done by two different people
- the same eyeline handed over
- the same emotion changing owner

Say in the card: JOINS Scene 2 → Scene 3. Name which two of the six devices it uses. If it does not join two things, it is not a merge shot – cut it.

HOLD, DRAPE AND WEAR MECHANICS ☆

(Tumhara "kab kaise kisko hold krna hai kaise odhna hai" – yahi hai.)

This is where AI clips fall apart. Never write "they embrace" or "she adjusts her dupatta". Write the physical steps, in order, with the limbs named.

HOLDING: which hand, where it grips, how hard, and what the other hand does at the same time.

"Her left hand closes on his right forearm just below the elbow, thumb on the outside; her right hand stays at her side."

DRAPING: lift → travel → land. Three steps, three timestamps.

"She lifts the cloth with her right hand to shoulder height, carries it across her chest, and lays it over the left shoulder; it settles and stays."

WEARING: what moves when the body moves. Sleeve, hem, veil, hair.

"When she turns, the hem sweeps a quarter turn behind her and settles."

TOUCHING: contact must be visible for at least one full second, and the second person must react to it – a breath, a blink, a small change of weight.

Never let a cloth, a hand or a garland pass through a body, and never let it change from one shoulder to the other between shots.

CAMERA COVERAGE – 4 TO 6 SETUPS, VERIFIED ☆

Choose 4 to 6 setups for the whole film and never invent a seventh.

A – WIDE / master: the whole place, tiny people, one landmark

B – MEDIUM: waist-up, two people if they are together

C – CLOSE: face, or hands doing the important thing
D – OVER-SHOULDER: we look past one person at the other
E – HIGH or TOP-DOWN: the ground, the spread, the arrangement
F – LOW: from knee height looking up, for power moments only

Camera height must be written in every card, in centimetres:
ground 0 · knee 45 · chest 120 · eye 160 · high 250 · top 300+

Laws:

- Every scene must be covered from at least FOUR of the setups.
- Never two shots in a row from the same setup, unless the second is a deliberate hold on the same face.
- Exactly ONE bold camera move in the entire film (see).
- After a bold move, the next shot is locked or nearly locked.
- Print a small coverage table at the end: setup letter × how many shots use it. Any setup used fewer than four times, or a scene sitting in one setup, is a defect – fix it.

A DETAIL SHOT MUST DO TWO JOBS ☆

Every close-up of an object must (a) be the RESULT of the previous shot and (b) SET UP the next one. Write both jobs on the card:

DOES: the knot is already tightening because of Shot 05.
SETS: the same rope is what Shot 06 pulls.

A pretty object with no before and no after is filler. Delete it.

THE COSTUME STATE LINE ☆ (kapda actor hai, lock nahi)

Never write "she wears the same clothes as before". Write what the clothing is DOING in this shot, and keep the state continuous:

- at the start of the shot, the state it entered with (wet hem, loose sash, hair forward on the left, pallu on the head)
- what it does during the shot
- the exact state it leaves in, so the next card can start there

Print it on every card as: CLOTH STATE – starts / changes / ends.
If two neighbouring cards disagree about a garment's state, that is a defect – fix the pair.

THE PHASE ENGINE ☆ (quality, VFX aur look story ke emotion se automatically badle – tumhara main point)

The film has 3 to 5 EMOTION PHASES, already named in the STORY LOCK. They are law. Every card states its phase, and the phase chooses the look for you – I do not want to decide it shot by shot:

peace: wide, soft light, greens and cream, slow drift, no VFX
want: closer, warmer, one loud colour, light from one side, small natural VFX already building (dust, drifting petals, heat)
test: tighter, cooler, harder shadow, faster drift, weather VFX
break: closest, darkest, hand-held, the ONE big VFX event lands HERE
grace: opens wide again, bright clean light, the loudest colour of the film, calm locked frame

Rules:

- The phase overrides the genre mode: inside "break", the light is harder and the moves are shorter even if the genre is Drama.
- The look must stay consistent INSIDE a phase, so the audience feels the change when the phase changes.
- A phase change lands on a shot, not in the middle of one, unless the change is caused by something inside that shot – and then write the cause.
- Print the phase on every card, and print a small phase table before the cards: phase · shots · look · effects.

FRAME INVENTORY ☆ (ginti likho, warna model bana dega)

Every card carries a count. What is not counted does not exist in the frame, and if the model wants something, it must ask me first.

PEOPLE – how many, and where each one stands (left / centre / right, front / middle / back), with the distance in metres.

LIGHT – how many sources, what each one is, where it is, and its distance in metres.

OBJECTS – every object, with its number.
CLOTH – how many pieces on each person, and in what state.
DISTANCE – how far the camera is from the subject, in metres.
HEIGHT – which part of the body sits at the centre of the frame.

Write it straight onto the card:

FRAME INVENTORY – 2 people (her, centre, 1.5 m; him, left, 3 m) ·
2 lights (lamp, left, 1 m; fire, back right, 4 m) · 3 objects
(one brass thali, one folded cloth, one rope) · smoke level 2

AND THE RULE THAT MAKES IT WORK: whatever the Image prompt says
must already be in this inventory. If the image prompt mentions an
object that is not counted here, the card is wrong – either count
it, or take it out of the prompt.

NOW WRITE ONE CARD PER SHOT, IN THIS EXACT FORMAT

I will follow these cards literally. Everything I need must be on
the card. Never write "same as above". Never abbreviate.

SHOT 04 of 20 3 seconds CHAIN from 03
★ STORY LINE (mine, quoted): "her fingers close on the cloth
and she does not let go" ← the only reason this shot exists
PHASE: 2 "chaah" SHOT TYPE: hands + close SETUP: C

JOINS FROM: [what was still moving at the end of shot 03,
and how this shot catches that same movement – e.g.
"her hand was closing on the door handle; this shot
opens on that same hand, from outside, still pulling"]
HANDS TO: [what is still moving as this shot ends, so
shot 05 can pick it up – e.g. "the door is swinging
inward and her weight is already shifting forward"]

🌀 MOVE: [the exact named move from , then direction, then
speed. e.g. "Dolly In · slow · 1 metre" / "Truck Right · matching
her pace" / "Static · locked off". One move only, never two. Mark
it ★ if this is the film's single bold move.]

🌀 ATMOSPHERE (start → end): [the numbers from , then the look,
then the direction – e.g. "smoke 2 → smoke 1: two wisps at chest
height drifting left to right at walking pace, lit from behind by
the lamp; ends as the column thins and clears her eyes and mouth"]

✧ PRACTICAL ELEMENT: [one physical thing moving in the air or on
the ground in this shot – dust, smoke, spray, cloth, leaves. One
only. Never a glow or a light ray.]

🔄 HANDOFF: [if this shot hands over to the next one through a
moving object, name the object, its direction, its speed and
where it sits in the frame at the last frame – and write the
same four things as the first frame of the next shot. Otherwise
write "normal join".]

🦋 BIG EFFECT: [only on the film's ONE effects shot – the physical
event that happens in front of the camera, and what it does to
her: the light it throws on her face, what it moves in her hair
or cloth, what it displaces on the ground. Write "none" on every
other shot.]

👁️ FACE REVEAL: [yes / no. If yes: which way the smoke or veil
moves, how many seconds until the eyes and mouth are clear, and
the one front light source with its distance. See .]

👔 CLOTH STATE: [starts → changes → ends. Which garment, on which
shoulder, wet or dry, how it moves during the shot, and the exact
state it leaves in. See .]

🗣️ ACTING: [THOUGHT – one line of what she is thinking, in her own
words. TURN – from what to what, and the second it turns. LEAK –
the one involuntary thing. BUSY BODY – what her hands are doing
while her face feels. Never one held expression.]

👤 MOVEMENT THROUGH THE FRAME: [one line – she enters frame left
and exits frame right / she walks toward the lens and passes it /
the camera pulls back and she shrinks. Never blank.]

ENTERS FROM: [which edge] EXITS AT: [which edge]

🦋 BEHIND HER: [what fills the background in this shot, and how it
differs from the previous shot. If it is the same as the last two
shots, this shot is stalling – move her on.]

📏 DISTANCE COVERED: [for a travelling shot: where her body is at

the first frame, where it is at the last frame, and roughly how many metres apart those are. Then name the landmarks she passes on the way. If the honest answer is "the same place", this shot is walking on the spot – rewrite it. Write "none, she stays put" only for a shot that is deliberately stationary.]

📍 DESTINATION: [how far away the film's destination is now, and whether it is visible in this frame]

📦 FRAME INVENTORY: [people (how many, where, how far) · lights (how many, what, where, how far) · objects (each, with its number) · cloth pieces · camera distance · frame centre height. Nothing may appear in the prompts below that is not counted here.]

STAYS THE SAME ALL CLIP: [face, hairstyle, each garment and its exact state, each piece of jewellery, what each hand holds, light direction. These must be identical in the first and last frame.]

ONLY THING THAT CHANGES: [the one action, plus the expression moving one step. Nothing else.]

STORY: [one plain sentence – what is happening in the film right now and why it matters. A stranger must understand this line on its own.]

JUST BEFORE: [the previous event]

JUST AFTER: [the next event]

AUDIENCE FEELS: [what they feel watching this]

● NOT ADDED: [nothing in this frame comes from your own imagination. Only the story line above, the character DNA, the location DNA and the objects in the inventory. Any small choice you had to make goes to MY ASSUMPTIONS at the end.]

STEP 1 – MAKE THE FRAME

UPLOAD: CHAR-radha.png only – the upload portrait, nothing else. [Name only the characters actually visible in this shot. Never the world sheet, never the character sheet grid, never the style image. One portrait per visible character, and no more. Stacking references is what makes a face come out cartoonish.]
SAVE AS: SHOT-04.png

PASTE THIS INTO THE IMAGE TOOL:

[The complete image prompt, written in THIS ORDER. The order is not decoration – an image model weights the words nearest the start most heavily. A realism instruction parked at the end arrives too late to stop the model rendering calendar art. So the capture comes FIRST and the description second.

1. THE CAPTURE, first words of the prompt:
"Photographed on a modern digital cinema camera, ARRI Alexa 35, Cooke S7 anamorphic [n]mm lens at T2.8, [shot size], camera height [n] centimetres, [angle], clean and sharp with deep blacks."
2. THE LIGHT, second – one source, named, with a dark side:
"Lit by [one named source] from [exact direction], so the [named] side of the face is bright and the [named] side falls into real shadow. Colour temperature [warm low sun / cool overcast / warm lamplight]."
△ ONE source only. Light arriving evenly from everywhere is the number one reason an image reads as a 3D render. There must be a bright side and a shadow side on every face.
△ Never light a FACE only from behind. Backlight hides skin texture, and hidden texture is what makes skin look like plastic. If the sun is behind them, name the front fill too.
★ THE EXCEPTION – go all the way to a FULL SILHOUETTE. Let the figure go completely black against a bright sky or a bright doorway and backlight becomes the strongest shot a generator can make: no skin, no face, no detail left to get wrong, just a perfect black shape. One of these per film, on a big moment, is almost free quality. What fails is the half-measure – a backlit face that is still half-visible. Either light the face properly, or kill it completely.
3. ★ the FULL DNA LINE for every character in this shot, pasted word for word from PROMPT 2. The whole line, every garment, every ornament. Never a shortened version, never "the same

person as before". This is an IMAGE prompt – there is no picture for the tool to work from, so the complete line is what holds the face across the whole film.

4. the exact number of people: "EXACTLY ONE PERSON IS IN THIS FRAME: [name]. No one else, no second figure, no duplicate, no reflection, nobody in the background."
5. the figure size: "the figure fills about one-third of the frame height"
6. THE FACIAL EXPRESSION AT FULL STRENGTH, written as muscles – the still must ALREADY carry the performance
7. "a clear, strongly readable facial expression, not neutral, not a blank passport expression, the emotion visible in the eyes, brow and mouth at once"
8. the exact body posture and what each hand holds
9. the location DNA line, and the palette
10. the ATMOSPHERE with its numbers, written as positive fact: "smoke level 2 – two thin wisps at chest height drifting left to right; her eyes and mouth completely clear"
11. 9:16 vertical
12. THE TEXTURE. A model left alone renders skin as smooth plastic. Texture is what makes it a photograph – but texture is not AGE. Never write pores, wrinkles, weathered, tarnish, faded, worn, slub or film grain for a young character; those words are what make a twenty-year-old come back looking fifty, and what makes a new film look like an old one. Include instead, word for word: "healthy skin with fine natural texture and a light sheen on the forehead and cheekbones, individually visible hair strands, fine soft hair at the hairline, crisp new fabric with a soft sheen where it catches the light, bright polished metal with deep sharp engraving, true depth of field falloff, clean modern digital capture, very deep blacks, clean bright highlights, strong contrast, a restrained palette sitting near grey with one colour allowed to be strong"
13. **THE CLOSING LINES – AND READ THIS WARNING FIRST.**

DO NOT WRITE A LIST OF "no this, no that" INTO THE PROMPT.

This is the most damaging mistake in AI image work and almost every guide gets it wrong. Most tools people actually use – ChatGPT, Gemini and the rest – have NO separate negative box. There is only one text field. Whatever you type goes in as things to DRAW. These models cannot process "no", "not", "without" or "avoid"; the words simply register as content.

Write "no god rays, no glowing skin, no floating petals" and you have just asked, in plain language, for god rays, glowing skin and floating petals. Ask for "a field with no horses" and you get horses. The longer your ban list, the more of the forbidden thing you are ordering.

✓ SO STATE EVERY CONSTRAINT AS A POSITIVE FACT INSTEAD.

instead of "no plastic skin, no waxy skin"

→ "healthy skin with fine natural texture, a light sheen on the forehead and cheekbones"

instead of "no god rays, no glow, no aura, no haze"

→ "clear dry air; every surface lit only by direct light and its own cast shadow; the darkest areas stay dark"

instead of "no floating petals, no particles, no sparkles"

→ simply do not mention petals or particles at all.

instead of "no duplicate person, no extra people"

→ "exactly one person is in this frame and the space behind is empty"

instead of "no text, no watermark, no logo"

→ "every surface in the frame is blank and unmarked"

So the prompt ENDS with this positive closing block, word for word, and with no ban list anywhere:

"Healthy skin with fine natural texture, a light sheen on the forehead and cheekbones and soft fine hair at the hairline.

Clear air; every surface lit only by direct light and its own cast shadow, and the shadow side stays genuinely dark. A restrained palette sitting near grey with one colour allowed to be strong, very deep blacks, clean bright highlights, strong contrast. Crisp new woven fabric falling in sharp folds with a soft sheen where it catches the light. Bright polished metal with deep sharp engraving. Clean modern digital capture, sharp through the eyes. Every surface in the frame is blank and unmarked."

▽ ONLY IF YOUR TOOL HAS A SEPARATE NEGATIVE BOX ▽

A few tools do have a real, separate negative field. If and only if you are using one, put a SHORT list in that box – never in the main prompt, and never more than about six terms:

"3d render, cgi, illustration, calendar art, plastic skin, extra limbs"

If you are pasting into ChatGPT or anything with a single text box, use nothing from this line.

✓ CHECK BEFORE MOVING ON: cover the body and look only at the face. Can you name the emotion? If not, regenerate with stronger muscles. A beautiful frame with a blank face is a failed frame. [Also state what specifically to look for in this frame.]

STEP 2 – MAKE THE VIDEO

UPLOAD: SHOT-04.png as the FIRST FRAME

[ONLY if this shot and the next are in the SAME place with almost the same framing: SHOT-05.png as the LAST FRAME.

If the next shot is in a different place, or the framing jumps, upload the first frame ONLY – see the rule below.]

△ UPLOAD NOTHING ELSE. One image, or two if you pinned the last frame. Do not add the character sheet, the world sheet, the style image or the previous clip on top.

★ WHEN TO PIN A LAST FRAME – AND WHEN IT RUINS THE CLIP

Many tools accept a first frame AND a last frame. Used correctly it is the strongest continuity tool there is. Used wrongly it is the reason a clip suddenly CUTS to a different scene halfway through.

△ THE RULE: pin a last frame ONLY when the two stills are the same place, the same framing class and only a small change apart.

A video model treats the two pinned frames as one continuous motion path. If they are far apart – different location, wide to extreme close-up, subject on the left then on the right – the model cannot travel between them in four seconds, so it does the only thing it can: it invents a camera move that does not exist, or it dissolves and morphs one scene into the other. On screen that reads as the clip changing scene in the middle. That is not the tool failing. That is two endpoints too far apart.

✓ PIN THE LAST FRAME when:

- both stills are in the SAME location
- the shot size changes by at most one step (medium → medium close, never wide → extreme close-up)
- the subject stays on roughly the same side of the frame
- the light direction and colour are identical
- the whole change is something a body could really do in the clip's length

x DO NOT PIN A LAST FRAME when:

- the next shot is in a DIFFERENT PLACE. This is the big one. Never pin across a location change. Let the clip end on its own end state and make a normal cut in the edit.
- the framing jumps more than one step
- the subject crosses to the other side of the frame
- the light changes

In all of those, give the tool the FIRST FRAME ONLY and write BLOCK 3, the end state, with real care.

IF YOUR TOOL ONLY TAKES A FIRST FRAME:

- Press EXTEND on the previous clip instead of starting fresh.
- Failing that, take the last frame of the previous clip, upload it as this clip's first frame.

- Then BLOCK 3 below must be written with real care, because the end state is the only destination the model is given.

THE BEATS – one line per second, all of them filled:

0-1s: [one small physical fact]
 1-2s: [one small physical fact]
 2-3s: [one small physical fact]
 [as many lines as the clip has seconds – never fewer]

PASTE THIS INTO THE VIDEO TOOL:

[Write it in the blocks below, in this exact order, every time.
 Never skip a block.]

★ THE LAW OF THIS BLOCK: THE STILL IS THE TRUTH.

The uploaded still has already decided the face, the clothes, the place, the framing and the light. So the video prompt asks for ONE thing only: MOVEMENT. It must not describe the place, the clothes, the face, the light or the colour again. Those are in the still, and the model copies what it sees. Re-describing them is exactly how the face and the scene start to change.

Write it in the SEVEN BLOCKS below.

BLOCK 0 – THE IDENTITY LINE.

Write the identity as a SHORT LOCK, not a full re-description:

"The woman in the uploaded first frame. Her face, hair, lehenga, dupatta and every ornament stay exactly as they are in that frame."

Then add ONLY the identity facts the still cannot show because they are out of frame or about to enter it – for a close-up of a face, name the braid and the anklets if the body enters later.

WHEN TO PASTE THE FULL DNA LINE INSTEAD (three cases only):

- the shot is a CUT to a new place, where you are NOT feeding the previous clip's last frame
- the tool ignores the upload and invents its own person
- the character is partly out of frame in the still and walks fully into view during the clip

BLOCK 0B – MOVEMENT THROUGH THE FRAME, one line, from .

"She enters frame left, crosses, and exits frame right."

"She walks toward the camera and passes the lens."

Never leave this out. A clip with no travel is a dead clip.

BLOCK 1 – THE ONE ACTION, in five words or fewer.

"She pulls the door open." "He lifts his head."

One verb. If you need "and", it is two shots, not one.

△ There is no word limit on this prompt. The old advice to keep video prompts to 25-45 words is WRONG for this workflow and it is what caused faces to change mid-film. Length spent on identity and on the second-by-second beats is never wasted; only vague words are wasted.

BLOCK 2 – THE BEAT TIMELINE, one line per second of the clip.

This is what stops the clip inventing a different action halfway. An unbooked second is a second the tool fills itself.

★ EVERY LINE HAS TWO HALVES: the BODY, then the FACE. A beat line with no face in it is a second of dead acting.

0-1s: her fingers close on the handle – her eyes are still down, mouth closed, holding

1-2s: her wrist turns, the door starts to swing – her chin lifts a little, her eyes come up to the gap

2-3s: she steps forward through the opening – her brows pull together, her lips part slightly as she sees

Every second of the clip length must have a line. A 4-second clip gets 4 lines. An 8-second clip gets 8.

★ On a travelling shot, every line also says HOW FAR she has got, with a named landmark (see).

BLOCK 2B – THE PERFORMANCE. ★ THIS IS WHY ACTING LOOKS FAKE.

A face that holds one expression for the whole clip is what a bad new actor does. A real actor's face CHANGES, and the

change is the performance. Write all four, every clip:

THE THOUGHT – one line of what is going through her head during this clip, in her own words. Not an emotion word, a thought. "He is going to say no and I already know it."

THE TURN – the face must travel FROM one state TO another, and you must name the second it turns:
"she begins almost blank, controlled; at 1.6 seconds her eyes narrow and her jaw sets and she stays there"
Never the same expression at the first frame and the last.

THE LEAK – one small involuntary thing the body does that she is not choosing: a swallow, a late blink, breath caught and released, nostrils widening, a lip pressed flat, fingers tightening on cloth, eyes going wet without a tear falling. One only.

THE BUSY BODY – what her hands or body are doing while her face is feeling. A character who only emotes, with still hands, reads as generated.

△ SUPPRESSION BEATS EXPRESSION. Wherever the emotion is big, write her TRYING TO HIDE IT and failing in one place.

△ Never: smiling at the camera · looking into the lens · a nod at the end · an expression that arrives and then holds for the rest of the clip.

BLOCK 3 – THE END STATE. Say exactly where the body is at the final frame. This is the single biggest cause of a clip that starts right and goes wrong: the tool finishes what you described, finds it still has seconds left, and invents something to fill them. Booking the final frame stops that.
△ END STATE does NOT mean "stops moving". The body must still be in motion at the last frame – but it must be THIS motion, at a stated point, not a new one:
✓ "at the final frame her front foot is landing on the road and her weight is still travelling forward"
✓ "the last frame catches the door still swinging inward, halfway open"
× "then she settles and holds still" ← puts a full stop in the middle of your film and kills the join
Only a shot that truly ends the film may come to rest.

BLOCK 4 – ONE camera move, measurable, and nothing else.
☆ Use the EXACT NAMED MOVE from , not a description of it.
"Dolly In, slow, about one metre of travel"
"Truck Right, matching her walking pace"
"Static, camera locked off"
Always name the move, then the direction, then the speed.
Never two moves stacked.
△ WHEN BOTH THE CAMERA AND THE SUBJECT MOVE, SAY HOW THEY RELATE: "the camera follows behind her at her walking pace, holding the same distance, while the lane slides past on both sides." Say what the camera does RELATIVE TO HER.

BLOCK 5 – ONE environment motion, WITH ITS NUMBER from .
"Smoke level 2 – two thin wisps at chest height, drifting left to right at walking pace, lit from behind by the lamp."
"Rain level 1 – a few slow drops on her shoulder, visible against the dark cloth."
One element. A real physical thing. Never a glow or a ray.

BLOCK 6 – THE LOCK LINE, word for word, every single clip:
"This is the same person as in the uploaded frame – the same bone structure, the same eyes, the same nose, the same lips, the same age, the same skin. Same clothes, same jewellery, same hair from the first frame to the last. Her EXPRESSION changes exactly as described above; her identity does not. She performs this one action and this action only. The camera makes this one move and holds it. One continuous unbroken take in real time; everything visible at the first frame is still there at the last."

△△ THE REASON ACTING LOOKS FAKE – READ THIS.

The old version of this line said "the face holds exactly as it is in the uploaded frame for the whole clip". That line locks the PERFORMANCE, not just the identity. A tool given that line does the only thing it can: it holds one frozen expression for four seconds while the body moves underneath. On screen that is exactly a beginner actor holding a face and waiting for the director to say cut. Lock WHO the person is. Never lock what their face is doing.

Write positively throughout. Never "don't move the camera" – write "the camera is locked and still".]

SAVE AS: CLIP-04.mp4

✓ CHECK: [what must be true in this clip]

IF IT FAILS: [a simpler fallback prompt for this exact shot]

THEN

→ NEXT: go to SHOT 05.

[If the next shot chains: "Screenshot the LAST FRAME of CLIP-04 first – shot 05 needs it."]

RULES FOR THE CARDS

- One clip = ONE action. If a description needs "and" between two physical actions, split it into two shots. A clip asked to do three things will skip two.
- Clip length: 3-4s for a look, a blink, a turn, a reaction · 5s for walking or reaching · 8s for approaching or a full beat. Shorter clips drift less. Reactions are best at 3-4s.
- CHAIN inside a continuous moment. CUT only for a new time or place. Say which on every card.
- Body state at the end of a shot must equal the body state at the start of the next. If they differ, the change must be shown – that is a missing shot, add it to the chain and renumber.
- Nothing held may vanish or swap hands unexplained.
- No dialogue. The film must work on mute. Give ambient sound per shot instead.
- Everything must be supported by the research and the chain.
- EVERY CARD CARRIES ITS JOIN. On every card, under the header, write two lines:
 - JOINS FROM: what was moving at the end of the previous shot, and how this shot picks that same movement up.
 - HANDS TO: what is still moving as this shot ends, so the next shot can catch it.
- Shot 01 writes "JOINS FROM: film opens" and still writes HANDS TO.
- NO SHOT MAY START FROM STILL unless the previous shot ended with that same body already still. Movement at the cut is what makes two clips read as one continuous piece.
- A NEW PLACE IS ALWAYS ENTERED ON SCREEN. If this card is the first in a new location, the character must physically come into it in this shot or the one before. Never a waiting frame.
- THRESHOLD SHOTS ARE REAL SHOTS. Doors, gates, steps, paths, corners get their own card with their own image and video prompt. They are not optional and they are not filler – they are the glue. A person must be doing something physical in every one.
- EVERY SHOT CARRIES ITS PHASE from and its numbers from .
 - A card with no phase, or with "some smoke" instead of a level, is an unfinished card.

🔄 BEFORE YOU SHOW ME ANYTHING – RUN THIS LOOP

You are not finished when the cards are written. You are finished when they survive this. Run it yourself, silently. Do not show me a draft and ask if it is right. Fix it, then show me.

PASS 0 – IS THIS STILL MY FILM?

Put the STORY LOCK beside the cards. Same events, same order, same people, same feeling, same ending? Every difference is a defect and the lock always wins. You may not improve the story.

PASS 1 – READ IT AS A FILM

Read only the STORY lines of every card, in order, as one paragraph. Does it read as ONE event a camera followed, or as

separate pictures? Every place it reads as separate is a defect.

PASS 1B – THE TRACE AND THE ADDITIONS *

- Does every card open with a quoted STORY LINE? Any card without one is invented – delete it or mark it PURE TRANSITION.
- Is the invented table printed and filled?
- Is the MY CHEEZEIN coverage table printed, with every item pointing to a shot? Any item with no shot is a missing piece.
- Is any object, person, animal, weather or ritual step in any card that is NOT in my story or the STORY LOCK? Cut it, or move it into MY ASSUMPTIONS.
- Is MY ASSUMPTIONS printed at the very end, one line per choice?

PASS 2 – THE MOTION HANDOVER

For each pair, put shot N's closing motion beside shot N+1's opening motion. Not merely compatible – the SAME movement from two angles. Any pair where it is not is a defect.

PASS 2B – THE JOINS AND THE THRESHOLDS

Walk the film as a route, out loud, in one sentence:

"she is HERE, then she goes THROUGH here, then she is HERE."

If you cannot say it without the word "then suddenly", the film is not connected. Defects: any new location not physically ENTERED on screen · any place left without seeing her begin to leave · any A-B move with no threshold shot of a real physical action · any join row with fewer than two things carrying across · any threshold that is scenery with nobody in it.

Fix by writing the missing threshold shot and renumbering.

* And between two SCENES: is the merge shot from there, with its two named devices?

PASS 2C – THE OPENING

Look only at shot 01 and shot 02. Is something already moving at 0.0s, or does the film warm up? Does shot 02 physically grow out of shot 01? A slow establishing wide, an empty landscape, a fade in, or a static frame waiting for someone to enter is a defect.

PASS 2D – HANDOFFS AND SAFE SHOTS

- Read the SHOT TYPE column down. Count wide and full-body rows against detail rows (hands, eyes, objects, silhouettes, feet, backs of heads). If detail shots are not roughly three to one, rewrite until they are. This one ratio decides whether the film reads as expensive or as AI.
- Is there at least one full silhouette, on a big moment?
- Are there at least TWO object handoffs, one on the hardest jump in place or time? For each, do all four things match across the cut – the object, the direction, the speed, the position in frame? Is the handoff object already in the story?
- Is any full-body walking shot longer than two seconds? Cut it down or replace it with feet, or with a silhouette.

PASS 3 – THE ACTING

Does every face shot state what the character wants, what the face shows, what it hides, and one tell? Is the expression written as muscles at full strength, so the still already carries it? Any named emotion left standing alone is a defect.

PASS 3A – THE PERFORMANCE SWEEP

Every shot with a face, check all six:

- Does the face CHANGE during the clip, with a named second where it turns? One held expression across a whole clip is the single biggest reason acting reads as AI.
- Is there a THOUGHT written in the character's own words?
- Is there exactly one LEAK? Not three.
- Are the hands and body doing something while the face feels?
- Is the big emotion HELD DOWN rather than performed?
- Does any video prompt still say the face holds exactly as it is in the uploaded frame? Delete that wording now.

PASS 3B – THE CALENDAR ART SWEEP

- Does every image prompt OPEN with the capture – camera, lens, aperture, shot size, camera height? If the realism wording is parked at the end, move it to the front.
- Is the word "photorealistic" used as a magic word? Delete it.
- Is there ONE named light source with a direction, a bright side AND a shadow side? Is anyone lit only from behind and still

half-visible? Either add a named front fill, or push it all the way to a full black silhouette.

- Does the film have ONE full silhouette shot on a big moment?
- Search every prompt and delete: glowing, luminous, radiant, aura, halo, god rays, light shafts, sunbeams, golden mist, golden haze, divine light, ethereal, dreamlike, otherworldly, magical, shimmering, sparkling, floating petals, floating particles, bloom, lens flare, backlit glow, rim glow, heavenly.
- Divine characters: is the divinity carried by MATERIALS (heavy silk, worked gold, uncut gems, fresh flowers) and not by light?
- Is the TEXTURE there – fine skin texture, a sheen on the cheekbone, separate hair strands, real fabric?
- △ Is any AGEING language there – pores, wrinkles, weathered, tarnish, faded, worn, slub, film grain, muted? On a young character every one of those is a defect.
- △△ Is there a BAN LIST in any prompt? Search for "no ", "not ", "without", "avoid". Every one is a defect. Rewrite each as a positive fact. The only exception is a real separate negative box, no more than six terms, in that box only.
- △ Does any prompt contain a DEITY'S NAME – Krishna, Radha, Shiva, Ram, Hanuman, Durga – or Lord, Shri, deity, divine, God? Delete every one and write the physical description instead.
- Any poster buzzword – 8K, 4K, ultra-realistic, masterpiece, premium, devotional, majestic, epic, breathtaking, cinematic, poster, artwork, rendering? Delete and put a lens or a light in its place.
- Is the colour restrained, or is everything saturated gold?

PASS 3C – THE CAMERA SWEEP

- Does every shot name an EXACT move from , with a DIRECTION and a SPEED?
- Count the bold moves – exactly ONE in the whole film.
- Is any shot stacking two moves? Do two neighbouring shots use the same move AND the same size?
- Does the film keep to 4-6 setups (), each used at least four times, and is any scene stuck in one setup?
- Is the GENRE MODE stated, and does every clip length, move and light choice obey it – with the PHASES () overriding inside each phase?
- Is there exactly one speed ramp, on the peak?
- Does every shot name ONE practical element, and is it a real physical thing rather than a glow or ray?

PASS 3D – MODERN AND BIG

- Does every character DNA line open with an AGE IN YEARS?
- Search every prompt for: pores, wrinkles, lines, weathered, worn, faded, tarnish, slub, grain, muted, aged, dusty, peeling, cracked. On a young character or a present-day setting, every one is a defect.
- Is the capture line modern – digital cinema camera, clean and sharp – rather than film stock and grain?
- Exactly ONE big effect shot, on the peak. Not zero. Not three. Is it written as a physical event with its light on her face, what it moves on her, what it leaves behind, and her face receiving it? Does a reaction shot follow it?
- Would someone scrolling stop on this? If no single frame is worth stopping for, build the peak.

PASS 3E – THE ATMOSPHERE AND FACE SWEEP ☆

- Does EVERY effect carry a number – smoke 0-5, fog 0-5, dust 0-4, rain 0-4, and the flame count for every fire? Any shot left saying "some smoke" or "light fog" is a defect.
- Does any shot with a readable face sit above smoke 2, fog 2 or rain 2? Bring it down.
- Does every face reveal have a direction, a movement and a duration, plus one front light source with its distance? Are the two shots after a reveal at smoke 0-1?
- Does every shot start at the exact level the previous shot ended on, and does any change of more than one step have a cause?

PASS 3F – THE MECHANICS SWEEP ☆

- Does every hold, drape or touch have named hands and the three steps (lift → travel → land)? Does contact last a full second, with the other person reacting?
- Does any cloth, hand or garland pass through a body, or change shoulder between shots?

- Does every detail shot have DOES and SETS written?
- Does every card carry a CLOTH STATE (starts → changes → ends), and do neighbouring cards agree?
- Does every card carry a FRAME INVENTORY with real counts, and is everything in the prompts counted there?

PASS 4 – THE REST CHECK

Any shot that begins or ends at rest is a defect – apart from the very first and the very last shot of the film.

PASS 4B – THE SECOND-BY-SECOND AUDIT

- Count the beat lines. Does the count equal the clip length in seconds? Fill them or shorten the clip.
- Is any second empty, vague, or a repeat of the one before?
- Does BLOCK 3 state exactly where the body is at the final frame, still in motion?
- Does any beat line contain a SECOND action? Split it.
- Does the STAYS THE SAME list name the face, hair, every garment with its state, every piece of jewellery and what each hand holds?
- Does anything change in the beats that is not in the ONLY THING THAT CHANGES list?
- ☆ Does the video prompt re-describe her face, clothes or the place? Delete those words. That is the "still is the truth" law – re-describing is what makes the face change mid-clip.
- Is more than one camera move asked for? Is the clip longer than the action needs?

PASS 4C – THE DEAD SHOT SWEEP

Does the FRAME change during each clip, or is a person standing in one spot while a small part of them moves? Any shot whose only movement is a hand, an earring, hair, cloth or a blink, with no travel, is a DEAD SHOT – rewrite it. Count the still shots: more than one in the film is a defect. Does every card have a MOVEMENT THROUGH THE FRAME line, an ENTERS FROM and an EXITS AT? Does the travel direction hold across the film? Any two neighbouring camera positions less than 30 degrees apart is a jump cut.

PASS 4D – THE TREADMILL SWEEP

For every travelling card: where is her body at 0 seconds, and where at the last second? If it is the same place, rewrite it. Does the card state FROM, TO and metres? Does something LEAVE the frame behind her, named, with the second it goes? Does something GROW ahead? Do the beats name landmarks rather than only body parts? Does her size or position change – or, if the camera matches her pace, does the background clearly slide past? Does the prompt state the camera-to-subject relationship?

PASS 4E – THE PROGRESS SWEEP

Read only the BEHIND HER column, top to bottom. Does the backdrop change at least every two shots? Is the destination visible and getting closer? Does the ground underfoot change? Could any two shots be swapped without anyone noticing – if yes, rewrite both. Do two neighbouring shots share both size and move?

PASS 4F – THE HANDOFF SWEEP

For every pair: is shot N's last frame the same picture as shot N+1's first frame? If the tool takes a last frame, is it said explicitly on the card? Does every still work as the previous shot's destination – same light direction, same distance class, body caught mid-movement? Does any video prompt describe the endpoints instead of the journey?

PASS 4G – THE DNA SWEEP

IMAGE prompts: full DNA line, word for word, every time; never shortened to "the same person as before"; full location DNA line. VIDEO prompts: SHORT LOCK, not a full re-description – with the full line only in the three justified cases. Does every video prompt end with the face lock line? Getting this split wrong in either direction is a defect.

PASS 4H – THE UPLOAD SWEEP

Does any card ask me to upload more than one portrait per visible character? Does any card ask for a character sheet grid, a world sheet or a style image? Remove them from every upload line. Does every video card upload the shot still and nothing else,

except a legitimately pinned last frame? Is the total number of images I must make as small as it can be?

PASS 4I – THE LAST FRAME SWEEP

For every card that pins a last frame: same location? framing within one step? subject on the same side? same light? a change a real body could make in this clip's length? Any "no" means unpin it and write the end state properly instead.

PASS 5 – THE FULL AUDIT

STORY: every character arrives and leaves on screen · nobody appears before their ARRIVES event · no action happens twice · every object tracked · a stranger could never ask "how did they get there?"

CONTINUITY: body state, hands, wardrobe and light checked shot to shot · light only moves forward.

CAMERA: 180-degree line held · screen direction held · eyelines match · every angle given an emotional reason · camera height stated everywhere.

FRAMING: every shot states the headcount and rules out duplicates · every shot states the figure size.

PERFORMANCE: every event has a reaction shot · no two consecutive shots hold the same expression · every character's face is different at the end than at the beginning.

CLIP DISCIPLINE: every second booked · constants named · stated final frame.

ROUTE: film travels one way · every place entered and left on screen · no place holds more than 3 shots in a row.

OPENING: opens mid-movement, no warming up.

THREAD: travelling object in 5+ shots · repeating frame · one ambient sound · colour accent.

PASS 6 – FIX

Rewrite the offending shots. Fix by rewriting the pair – extend the action, re-angle, move the cut into the motion, carry the camera, carry the sound. Never by inserting filler clips.

PASS 7 – RUN AGAIN

Go back to PASS 0. Keep looping until a full pass finds ZERO defects. Three or four rounds is normal. Do the work.

Then print at the top of your output:

CORRECTION LOOP: [n] rounds.

Fixed: [one line each]

Final pass: 0 defects.

This film plays as: [one sentence – the single continuous event the viewer experiences]

If you cannot honestly write "0 defects", you are not finished.

— AFTER THE CARDS —

Print, in this order:

1. THE TABLES – invented table · MY CHEEZEIN coverage · camera coverage (setup × count) · phase table · join table summary.
2. THE ORDER OF WORK – make every frame first, then every clip. Never alternate. List the exact sequence of files.
3. TRIM PLAN – clips × 8s versus target runtime, and how many seconds to keep from each clip. Mark the 3 shots that stay long. △ NEVER TRIM AWAY A THRESHOLD SHOT. When the film runs long, shorten the long middle shots – never delete the door, the gate, the steps or the entrance. A threshold may be cut to 1 second, but it may not be removed. Confirm the opening still begins mid-movement after the trim.
4. SOUND – ambient per shot, and one score prompt for Suno or Lyria.
5. EDIT SETTINGS – grain 8-15%, saturation -10 to -15%, warm shadows, cool highlights, vignette, 24fps, 0.3s dissolves.
6. MY ASSUMPTIONS – the full list, at the very end.
7. FINAL CHECK – a short list of what must be true before posting.

📋 NOW COPY PROMPT 04

PROMPT 04 — REACH

Film ban jaane ke baad. Iske saath STORY LOCK paste karna hai.

You are a release strategist for short vertical video. Your job is distribution: who sees this film, and how it reaches them.

TURN ON WEB SEARCH. Do not answer from memory. Every trend, song and number you give me must come from a search you actually ran today, and you must print the date you ran it.

I have finished a short vertical film. The story is in the STORY LOCK at the bottom. Read it first. Everything below is derived from that story.

🚫 DO NOT ASK ME ANY QUESTIONS

Never ask me about my channel, my brand, my follower count, my niche or what I am selling. I am selling nothing. This is a film. Everything you need is in the STORY LOCK. Derive it.

🔍 RESEARCH YOU MUST RUN BEFORE YOU WRITE ANYTHING

Run these searches now, in this order. Print one line of what you found under each before you move on.

1. The subject of my story + "trending reel song [current month] [current year]"
2. The subject + "trending audio Instagram reels" and the same for "YouTube Shorts"
3. The subject + "new song [current year]" – releases from the last 90 days only
4. The subject in Hindi script + "" / "" + the current year
5. The subject + "Nepali song" and the subject + "Nepali bhajan"
6. Google Trends style check: which spelling of the subject gets searched more – English, Hinglish, or Devanagari
7. "best time to post reels India" and "best time to post YouTube Shorts India" for the current year
8. Any festival, anniversary, fast day, full moon or temple event connected to my story that falls in the next 45 days

If a search returns nothing current, say "no current data" for that line. Never invent a song title, a view count or a chart position.

GIVE ME THESE TEN THINGS, IN THIS ORDER

NICHE LOCK – one line

Write one plain sentence describing what this film is about, in the words a viewer would use, not the words a film-maker would use. This single sentence is the category the recommendation system will file the film under. Then list the five topics a person who would love this film already watches.

THE SOUND – five candidates, honestly labelled

First write a one-line MUSIC BRIEF derived from the story: tempo in BPM, the emotional arc of the film in three words, the instrument the story is asking for, and whether the peak of the film needs the music to drop out or to swell.

Then give me FIVE songs that fit that brief, as a table:

#	Song and artist	Why it fits this story	Where it is rising	Search this exact text in the app
---	-----------------	------------------------	--------------------	-----------------------------------

Rules you must follow:

- Only songs released or revived in the last 120 days, plus at most one timeless track as a safe fallback.
- For each, write the exact words I should type into the in-app audio search, because titles are spelt differently in every app.
- Mark each one VERIFY. I will confirm it in the app myself.

- Then write the verification rule for me as four lines:
 - a sound with the little rising arrow and under 5,000 uses is the best possible pick
 - 5,000 to 10,000 uses means use it today or not at all
 - over 10,000 uses means I am late and the push is gone
 - the arrow beats the number: a rising sound at 50,000 outperforms a flat sound at 500,000
- Add one line on where the song should enter and where it should change, matched to the beats of my story.
- Add a two-line fallback: if nothing fits, what instrumental mood to use instead, and why original audio also earns distribution.

WHAT PEOPLE ACTUALLY TYPE – 25 keywords

Four groups. These are search phrases, not hashtags.

- 8 in Hinglish, the way people type on a phone keyboard
- 6 in Devanagari
- 6 in English
- 5 in Nepali

Beside each, mark HIGH or LOW competition, and mark the three I should put inside the first line of the caption and the title.

CAPTION – three versions, written out ready to paste

- INSTAGRAM caption: first line carries the main keyword and is under 40 characters, because only the first line shows before "more". Then two short lines of the story in Hindi. Then one line that makes a person send this to a specific other person. No question to the audience, no "comment below", no sales line.
- YOUTUBE SHORTS title: under 60 characters, main keyword first.
- FACEBOOK version: slightly longer, more story, Hindi only.

Write all three in full. Do not describe them, write them.

HASHTAGS – three tiers, 22 total

- 5 very large tags for category
- 12 mid-size tags that actually describe this exact story
- 5 small and country tags

Print them as one ready-to-paste block, and separately explain in one line what each tier is doing. Never more than 25.

YOUTUBE DESCRIPTION – written out, ready to paste

Two short paragraphs of the story using the keywords naturally, then a line naming the song used, then a block of plain-text search terms separated by commas, then the hashtags. Write it in full.

ON-SCREEN TEXT – three lines

The system reads the words burnt onto the video. Give me three short text lines to place on the film, each under 6 words, with the exact second each should appear and disappear, in Hindi, placed so they never cover a face. One of them must contain the main keyword.

COUNTRY PLAN – India, Nepal, and beyond

A table: Country | Why this story travels there | What to change. Cover India, Nepal, and the countries where this story already has an audience through migration and shared festivals. For Nepal give me one caption line written in Nepali and the Nepali spelling of the subject, because the Nepali spelling is often different and that one word is what makes the film reach Nepali feeds. For each country give the local clock time that equals my chosen upload time.

THE CLOCK – exact upload slots

Give me a table of the next 7 days: Day | Upload at (IST) | Same moment in Nepal | Why this slot. Base it on the search you ran, not

on memory, and state the rule that I should upload roughly two hours before the peak so the file has finished processing when the peak arrives. Mark ONE slot as the best slot of the week and say why. Then add any festival or temple date from your research that beats all of these, and what time to post on that day.

THE FIRST SIXTY MINUTES

A numbered list of exactly what I do in the hour after posting, with minute markers. Base it on how these systems actually behave: the film is shown to a small test group first, and whether it spreads is decided mostly by how long people watch, whether they watch it twice, and how many people forward it to one other person in a message. Likes matter least. Build the list around those three. Keep it to seven steps or fewer and make every step a physical action I can do on my phone.

HOW TO WRITE ALL OF THIS

Write every caption, title, description, hashtag block and text line out in full, ready to copy. Never describe what I should write. Never say "something like". Never leave a blank for me to fill. Explain each section to me in one plain Hindi line written in Roman letters, because I do not read English fluently.

Everything must come from the story below. Nothing invented about me, my channel or my audience.

[PASTE YOUR STORY LOCK HERE]

✓ Sab ho gaya — ab ye karo

1. PROMPT 01 → STORY LOCK
2. PROMPT 02 → style test, phir saare portraits
3. PROMPT 03 → saare shot cards
4. Saari IMAGES banao (SHOT-01 → last) <- ek saath
5. Saare CLIPS banao (CLIP-01 → last) <- ek saath
6. Trim → edit → grade → audio
7. PROMPT 04 → gaana + caption + timing

⚠ Agar AI mann marzi kare, ye teen line bhejo

- "Shot 07 ka STORY LINE kahan hai? Jo line nahi hai wo shot hata do."
- "Video prompt me sirf movement likho — jagah, kapda, chehra dobara mat likho. Still hi sach hai."
- "Step 3 abhi nahi. Sirf portraits do."
